Re: Medtronic Inc request Class II permissive change of a previously certified device

Gentlemen:

This Class II permissive change request applies to FCC ID: LF5MICS. The antenna assembly has been replaced with a new design to improve omni-directionality. This change will be incorporated in all units once accepted by the Commission.

In support of the Class II change, a test report for radiated emissions is being submitted with the application and photos of the new antenna design.

Sincerely,

Phillip Inglis
Consultant to Medtronic.
