

## WIRELESS CHARGING PAD

for Apple, Samsung,  
Smartphones & More

English Manual

### NOVO PAD DETAILED VIEW

#### Novo Wireless Charging Pad

The Novo Wireless Charging Pad is a compact wireless charger for your smartphones, tablets and more. Utilizing the latest in wireless technology, it features compatibility with the Qi Wireless Standard and high output 15 watt wireless fast charge support. The Novo's versatility makes it the perfect companion for charging wirelessly when at home or on travel.

#### Wireless Charging Compatibility

The Novo works with most Smartphones, Tablets, and Devices that are compatible with the Qi wireless standard for wireless charging. To ensure device compatibility with the Novo Pad, please check your smartphone or device's product specifications.

#### Charging your Smartphones, Tablets & Devices

Find a location to place your Novo that has a flat surface and is convenient for wireless charging. Connect the included USB-C cable tip to the Novo's USB-C input port. Next, connect the opposite USB-C tip side of the cable to a compatible USB-C charging output port. We recommend using a USB charging port with at least 18 watts of output for the best charging speeds.

The wireless pad is now ready to charge devices. To charge your Smartphone or device, place the charging receiver side of your device at the center of the Novo Pad's charging area. The Novo's LED will light up and your device should indicate that it's successfully charging. To stop charging, simply remove your device from the charging pad.

#### LED Charging Indicator

The Novo features a multi-color LED that turns on when your device is charging wirelessly. The LED lights will later turn off after some time of charging use to conserve energy. If the Novo detects a wireless charging issue, the LED lights will flash.

#### Troubleshooting Tips

1. Phone or Device is not charging on the Wireless pad.
  - The phone's charging position may be misaligned with the phone's wireless receiver. Place your phone's receiver in the center of the charging pad.
2. Wireless charging is intermittent.
  - The USB power adapter or USB output port is not providing stable or sufficient power to the wireless pad. Use a compatible high output USB charger with with at least 18 Watt support.
  - The phone's charging position may be misaligned with the phone's receiver resulting in poor performance. Please adjust the phone's charging position for optimal charging.
3. Wireless Charging speed appears to be slow.
  - Your phone's protective case may be blocking the wireless signal. Remove the case or try a slimmer case option.
  - The phone's standby power consumption may be set too high. Reducing the phone's background apps and app usage may improve the charging speed.

#### Specifications

Model: BW03  
Input: 5V/2A, 9V/1.67A, 12V/1.5A  
Wireless Output: 15W (Max) / 10W / 7.5W / 5W  
Made in China

#### FCC WARNING

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To maintain compliance with FCC's RF Exposure guidelines, This equipment should be installed and operated with minimum 20cm distance between the radiator and your body. Use only the supplied antenna.
