Report No.: 2212RSU004-U2 Report Version: V01 Issue Date: 2023-01-17

RF Exposure Evaluation Declaration

FCC ID: 2A7MKSRR520

Applicant: Beijing Jingwei Hirain Technologies Co., Inc.

Product: Rear short-range ranging sensor

Model No.: SRR520

Brand Name: JINGWEI HIRAIN

FCC Classification: Part 95 Vehicular Radar Systems (VRD)

FCC Rule Part(s): FCC Part 2.1091

Received Date: 2022-12-01

Result: Complies

Approved By:

| Sobin Wu | Robin Wu | Robin

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standards through the calibration of the equipment and evaluated measurement uncertainty herein.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Suzhou) Co., Ltd.

Template Version:0.0 1 of 10

1. General Information

1.1. Applicant

Beijing Jingwei Hirain Technologies Co., Inc.

4F, Block 1, No.14 Jiuxianqiao Road, Chaoyang District, Beijing, P.R.China

1.2. Manufacturer

Beijing Jingwei Hirain Technologies Co., Inc.

4F, Block 1, No.14 Jiuxianqiao Road, Chaoyang District, Beijing, P.R.China

1.3. Testing Facility

Test Site – MRT Suzhou Laboratory						
Laboratory Location (Suzhou - Wuzhong)						
D8 Building, No.2 Tian'edang Rd., Wuzhong Economic Development Zone, Suzhou, China						
Laboratory Locat	tion (Suzhou - SIP)				
4b Building, Liand	o U Valley, No.200	Xingpu Rd., Shengpı	ı Town, Suzhou Indu	strial Park, China		
Laboratory Accre	editations					
A2LA: 3628.01		CNAS	S: L10551

China						
Laboratory Accreditations						
A2LA: 3628.02		CNAS	: L10551			
FCC: CN1284 ISED: CN0105						
Test Site – MRT Taiwan Laboratory						
Laboratory Location (Taiwan)						
No. 38, Fuxing 2nd Rd., Guishan Dist., Taoyuan City 333, Taiwan (R.O.C.)						
Laboratory Accreditations						
TAF: L3261-19072	25					
FCC: 291082, TW	3261	ISED:	TW3261			

1.4. Product Information

Product Name	Rear short-range ranging sensor	
Model No.	SRR520	
EUT Identification No.	22021201Sample#02	
Product Voltage	9 ~ 16VDC (12VDC nominal)	
Working Temperature Rang	-40°C ~ 85°C	
Note: The information of EUT was provided by the manufacturer, and the accuracy of the information shall		

Note: The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the responsibility of the manufacturer.

1.5. Radio Specification under Test

Working Frequency Range	76 ~ 77GHz	
Radar Type	Non-pulsed Radar (FMCW)	
Modulation type	Fast chirp	
Sweep Bandwidth	376MHz	
Sweep time	50ms	
Sweep rate	18.38 MHz/µs	

1.6. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

• FCC Part 2.1091 & KDB 447498 D04 Interim General RF Exposure Guidance v01

2. RF Exposure Evaluation

2.1. Test Limits

According to FCC §1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b)

Limits For Maximum Permissible Exposure (MPE)

Frequency Range	Electric Field	Magnetic Field	Power Density	Average Time		
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm²)	(Minutes)		
	(A) Limits for Occupational/ Control Exposures					
0.3-3.0	614	1.63	*(100)	≤6		
3.0-30	1842/f	4.89/f	*(900/f ²)	<6		
30-300	61.4	0.163	1.0	<6		
300-1,500			f/300	<6		
1,500-100,000			5	<6		
(B) Limits for General Population/ Uncontrolled Exposures						
0.3-1.34	614	1.63	*(100)	<30		
1.34-30	824/f	2.19/f	*(180/f ²)	<30		
30-300	27.5	0.073	0.2	<30		
300-1,500			f/1500	<30		
1,500-100,000			1.0	<30		

f= frequency in MHz. * = Plane-wave equivalent power density.

2.2. MPE Exemptions

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph §1.1307(b)(2) of this section): A single RF source is exempt if:

(Option A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph §1.1307(b)(3)(ii)(A) of this section.

Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(ii)(A);

(Option B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P is given by:

$$P th(mW) = \{ERP_{20cm}(d / 20cm)^x d \le 20cm\}$$

$$P th(mW) = \{ERP_{20cm} 20cm < d \le 40cm\}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20cm}\sqrt{f}}\right)$$
 and f is in GHz;

and

$$ERP_{20cm}(mW) = \{2040f \ 0.3GHz \le f < 1.5GHz\}$$

$$ERP_{20cm}(mW) = \{3060 \ 1.5GHz \le f \le 6GHz \}$$

(Option C) Or using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

Table 1 to §1.1307(b)(3)(i)(C) -	Single RF Sources Sub	ject to Routine Environmental Evaluation

RF Source Frequency (MHz)	Threshold ERP (watts)
0.3-1.34	1920R ²
1.34-30	3450R²/f²
30-300	3.83R ²
300-1,500	0.0128R ² f
1,500-100,000	19.2R ²

For multiple RF sources: Multiple RF sources are exempt if:

(A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph §1.1307(b)(3)(i)(A) of this section. Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(i)(A).

(B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(B) of this section for P_{th} , including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph 1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

 P_i = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source i at a distance between 0.5 cm and 40 cm (inclusive).

 $P_{th,i}$ = the exemption threshold power (P_{th}) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source i.

 ERP_j = the ERP of fixed, mobile, or portable RF source j.

 $ERP_{th,j}$ = exemption threshold ERP for fixed, mobile, or portable RF source j, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.

Evaluated_k = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limit_k = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from §1.1310 of this chapter.

Report No.: 2212RSU004-U2

2.3. Calculated Result

Product	Rear short-range ranging sensor
Test Item	RF Exposure Evaluation

Test Mode	Frequency Band	Turn-up EIRP	
	(GHz)	(dBm)	
Radar	76 ~ 77	21.64	

Note: Tune-up EIRP was declared by manufacturer.

For single RF source, Option C

Test Mode	λ/2π	R	Turn-up ERP	Threshold ERP
	(m)	(m)	(mW)	(mW)
Radar	0.0006	0.20	88.92	768

Note: R is from user manual.

Therefore, the device qualifies for RF exposure test exemption.
