- This scale should not be used to diagnose or treat any medical condition.

GENERAL USE

- Check the scale before using. **Do not** use the scale if it is damaged in any way.
- **Do not** strike or bang on the scale.
- **Do not** use the scale if there is a crack on the glass. While tempered glass is stronger and fractures more safely than ordinary glass, it may shatter unexpectedly after developing a slight crack. If you see a crack, contact **Customer Support** (see page 17).
- The glass platform is slippery when wet. **Always** make sure the platform and your feet are dry before stepping on for measurement.

- Place the scale on a hard, flat surface to avoid tipping.
- To weigh safely and accurately, stand with your feet shoulder-width apart while on the scale.
- **Do not** stand on the edge of the scale or jump on the scale.
- Avoid standing on the scale for a long period of time, or when not measuring yourself.
- **Do not** overload the scale. Maximum weight capacity is 400 lb / 180 kg.

VeSync App Setup

1. To download the VeSync app, scan the QR code or search "VeSync" in the Apple App Store® or Google Play Store.

Note:

- Please make sure your firmware and software are up to date.
- The VeSync app is continually being improved and may change over time. If there are any differences, follow the in-app instructions.

2. Open the VeSync app. **Log In** or **Sign Up**.
3. Follow the in-app instructions to set up your smart scale.
4. Tap **+** in the VeSync app.
5. Step on the scale and select your smart scale from the device list.

Note:

- You can tap on the product categories to jump to different sections of the device list.
- Make sure to choose the right device model (you can find it on the back of the scale) or it will lead to a connection failure.

6. Follow the in-app instructions to complete setup.

Note:

- You can change the scale's in-app name and icon at any time in the smart fitness scale settings.
- When the scale display turns off, the scale's Bluetooth will disconnect and go into auto-off mode. However, when the scale display lights up and the app is opened to the device page, the scale will reconnect to Bluetooth.

Creating a User

If you are a new user, you will need to enter physical information before weighing yourself for the first time so the scale can calculate your body metrics. Follow the in-app instructions to create a user profile.

Note:

- *Entering inaccurate information will make the scale's measurements less accurate.*
- *If you don't identify with the available gender options, or are unsure, pick the option that you think best physically matches you. This choice is used for physical measurements, such as body fat percentages.*
- *Children under 3 years of age cannot measure body metrics other than weight.*
- *Minors will need a guardian's consent to create a VeSync account.*

Using the Smart Scale

Note:

- Turning on Zero-Current Mode in the VeSync app will turn off the scale's electrical current and will only provide measurements for weight and BMI. This mode can be helpful for users who are pregnant or who have implanted medical devices, such as pacemakers.
- To measure your baby or pet, turn on Baby Mode and follow the in-app instructions for weighing. Baby Mode will not measure other body metrics and will only measure weight and BMI.

1. Place the scale on a hard, flat surface. **[Figure 1.1]**

Note:

- Placing on soft surfaces such as shaggy carpet may cause inaccurate measurements or tipping.
- The scale can be used on low-pile carpet with a fiber length 0.4 inches / 10 mm or less.

Note: If your smart scale is connected to the VeSync app, your results (such as BMI, Body Fat, etc.) will show in the app.

- If you're wearing shoes or socks, the scale cannot measure biometrics such as body fat. Step on the scale with bare feet.
- Make sure the scale is connected to the VeSync app (see **VeSync App Setup**, page 7).
- Make sure you entered your age, weight, and height in your account so the scale can make calculations for your other biometrics.
- Wait about 15 seconds for the weighing process to finish.
- If your feet are too dry or too wet, the biometrics may not be detected. Skin can become very dry during winter, apply moisturizer to your feet when the scale cannot measure other biometrics.
- Check if Zero-Current Mode is on. If it is, the scale will only provide measurements for weight and BMI, not other biometrics.

If your problem is not listed, please contact **Customer Support** (see page 17).
