6165		23.05				-19.55	24.75	30.95

Note 1: DUT will transmit on two of available channels which has highest allowed power based on response from AFC system. During testing, both channels were validated to ensure each channel's EIRP power does not exceed allowed power from AFC.

Note 2: UNII-5 Antenna Gain = 16.9dBi.

The device is driving cross-polarized antenna, which has 8 horizontal polarization antenna and 8 vertical polarization antenna.

Directional Gain (8H/8V) = 16.9dBi + 10log(Ntx = 8 / Nss = 8) = 16.9dBi.

Note 3: Conducted power were measured on sum of 8 horizontal polarization output ports. MIMO factor 3.01 is considered to calculate total conducted output power.

Note 4: The path loss between the DUT and the Spectrum Analyzer has been offset and configured in the Spectrum Analyzer.
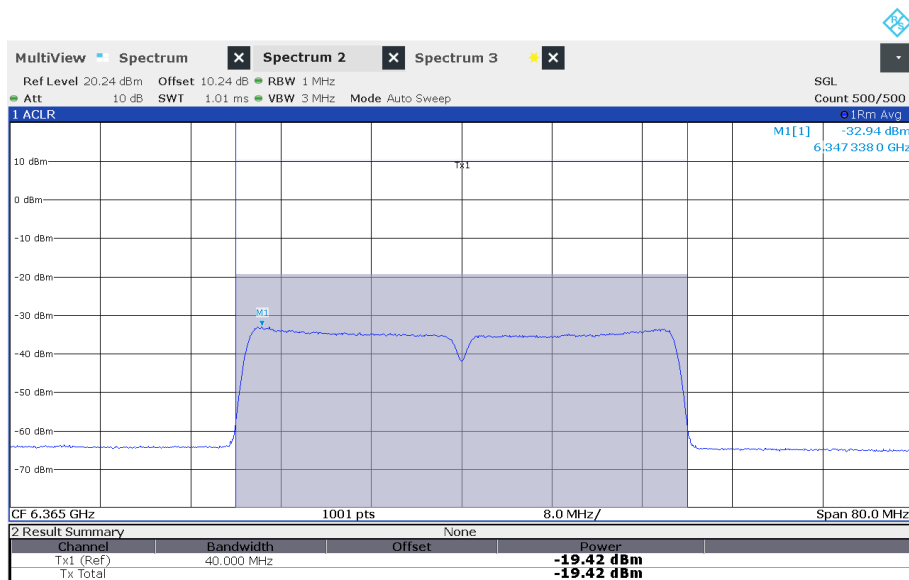

Note 5: The duty cycle factor, calculated as 10log(1/duty cycle) and listed in the table above, is used to compute the average power during continuous transmission.

1	The AFC DUT set to Initial Pre-test State. If needed (see Table 5 declaration), configure the AFC DUT with BSS parameters per Table 9 and a temporary test regulatory identifier (e.g., FCC ID), geographic coordinates, antenna height, and uncertainty parameters. Configure the AFC DUT Test Harness with TLS configuration that is the same as the default configuration defined in Section 2.3.1 except for the following: ● Run 1: A different server certificate (and private key) with SAN domain name entry "badafc.com" (i.e. that does not match AFC system URL's domain name); signed by the same root certificate as per Section 2.3.1 ● Run 2: A different server certificate (and private key) where all attributes other than Public Key are the same as the server certificate per Section 2.3.1, but the certificate is signed by a different root certificate ● Run 3: A different server certificate (and private key) with SAN domain name entry "wfatestorg.org" only (i.e. SAN domain name only matches suffix of AFC server's hostname); signed by the same root certificate as per Section 2.3.1 ● Run 4: A different server certificate (and private key) where all attributes other than Public Key are the same as the server certificate per Section 2.3.1 signed by the same root certificate as per Section 2.3.1, but the server certificate is revoked as indicated in stapled OCSP response ● Run 5: Same configuration as per Section 2.3.1, except OCSP stapling is disabled and CRL/OCSP servers are not available ● Run 6: Same configuration as per Section 2.3.1, except stapled OCSP response has expired and CRL/OCSP servers are not available ● Run 7: Same configuration as per Section 2.3.1, except only the TLS cipher suite "eNULL" (no encryption) is enabled ● Run 8: N/A (same configuration as per Section 2.3.1) Configure the DUT with the AFC System URL and the following root certificate: ● Runs 1-7: Root certificate as per Section 2.3.1 ● Run 8: No root certificate Trigger the DUT to send to the AFC DUT Test Harness an Available Spectrum Inquiry Request.
