

Sonicaid Freedom SF1-SL (Receiver Tune-Up Procedure)

Device factory tuning Procedure	The power is configured within the chipset (ADF7021) via software, the setting is hardcoded and it cannot be modified by the user.
Device factory output power checks to ensure device does not exceed declared maximum power level	Power level is measured for all boards, but using special test mode. Note that in normal operation the RF chipset is configured as receiver only.
Maximum power	Maximum power at chipset is set to -16.5dBm
