

# Standalone SAR test exclusion considerations

September 30, 2014

- Device category =  Portable device  Mobile device
- Max. transmitting frequency = 2475 MHz
- Min. test separation distance = 0 mm
- Max. power with turn-up tolerance = 3.00 dBm = 2.0 mW  
Typical Power = Max. 3.00 dBm
- Max. Antenna Gain = -0.99 dBi

## KDB 447498 D01 clause 4.3.1 Step 1) SAR test exclusion thresholds for 100MHz to 6GHz at test separation distances $\leq$ 50 mm

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0 \text{ for 1g SAR and } \leq 7.5 \text{ for 10g extremity SAR}$   
 $= [ (2\text{mW} / 5\text{mm}) ] \times [\sqrt{2.475\text{GHz}}] = 0.6$

Note. The calculation result was rounded to one decimal place for comparison.

→ ***SAR evaluation for general population exposure conditions by measurement or numerical simulation is not required.***
