Declaration about multiple RF technologies

16. Februar 2015

To Whom It May Concern,

In FVM2 Boardcomputer (FCC-ID 2ADRQNXTBFVM2) three RF technologies are implemented.

These are:

- RFID 13,56MHz
- 2,4GHz communication with certified module (FCC-ID U00-SM200)
- GSM communication with certified module (FCC-ID UDV-1103022011008)

None of these three technologies are used simultaneously.

In case of 2,4GHZ communication and GSM it is even impossible from hardware side, since both modules are connected to microcontroller via UART switch. In case of RFID system it is given by the use case (first user is identified by RFID-system and only afterwards id-data are transmitted to server via one of the two mentioned modules).

Sincerely
