

FCC ID placement.

Earin hereby submits justification for placing the FCC ID in the Associated User Manual.

According to the FCC Regulation and Guidance (*KDB Publication 784748 D01, Section 2.2*) allows for the FCC identifier to be moved to the User's manual in the event that "the device is unquestionably too small for the FCC ID to be readable (smaller than 4-6 points)".

Referring to the above quote, the size of a readable FCC ID to be printed onto the Earin Earbuds would be equal to 1.4x21mm.

- A. Printing onto the front cover (A): The small size cylindrical, cone shape of the front cover does not provide enough physical space to fit the printing of the FCC ID according to below reference picture.
- B. Side surface: The cylindrical ribbon shape of the back cover (B) is not possible to print with a visibly acceptable result as the top surface of each rib is 0.4mm in width.
- C. Back edge: The curvature of the circular ring (C) surrounding the connection PCB (D) makes the printing area too narrow to fit the height and length of the FCC ID.
- D. Connection PCB (D): The gold plated Earin Logo on the connection PCB act as contact interface during charging in the Earin capsule. The area outside the gold plating does not provide enough space for the required printing.

Conclusion: Based on the above description of area A to D , we conclude that the device is unquestionably too small for enabling the FCC ID to be printed onto any surface. We therefore request to have the FCC ID moved to the User Guide.

Best regards
