Report No.: BZT-15090233URF

This device described above has been tested by BZT, and the test results show that the equipment under test (EUT) is in compliance with the FCC requirements. And it is applicable only to the tested sample identified in the report.

This report shall not be reproduced except in full, without the written approval of BZT, this document may be altered or revised by BZT, personal only, and shall be noted in the revision of the document.

## 1. TEST STANDARDS

The tests were performed according to following standards:

**ANSI C63.10-2013** 

V1.0 Page 5 of 31 Report No.: BZT-15090233URF

## 2. SUMMARY

## 2.1. Equipment Under Test

#### Power supply system utilised

Power supply voltage :  $\bullet$  120V / 60 Hz o 115V / 60Hz

o 12 V DC o 24 V DC

Other (specified in blank below)

#### DC 3.7V from battery

## 2.2. Description of the Equipment under Test (EUT)

The **EUT (Bluetooth earphone)** support Bluetooth function.

| Name of EUT               | Bluetooth earphone           |  |
|---------------------------|------------------------------|--|
| Model Number              | S02                          |  |
| Antenna Type              | Internal                     |  |
| BT CE Operation frequency | 2402MHz-2480MHz              |  |
| BT Modulation Type        | GFSK,8DPSK,π/4DQPSK(BT V4.1) |  |
| Bluetooth                 | BT V4.1                      |  |
| Hardware Version          | V1.0                         |  |
| Software Version          | V1.0                         |  |
| Antenna Gain              | 0dBi                         |  |

#### Channel List:

| Channel | Frequency | Channel | Frequency | Channel | Frequency |
|---------|-----------|---------|-----------|---------|-----------|
| 00      | (MHz)     | 07      | (MHz)     | F.4     | (MHz)     |
| 00      | 2402      | 27      | 2429      | 54      | 2456      |
| 01      | 2403      | 28      | 2430      | 55      | 2457      |
| 02      | 2404      | 29      | 2431      | 56      | 2458      |
| 03      | 2405      | 30      | 2432      | 57      | 2459      |
| 04      | 2406      | 31      | 2433      | 58      | 2460      |
| 05      | 2407      | 32      | 2434      | 59      | 2461      |

| 07      | 2409      | 34      | 2436      | 61      | 2463      |
| 08      | 2410      | 35      | 2437      | 62      | 2464      |
| 09      | 2411      | 36      | 2438      | 63      | 2465      |
| 10      | 2412      | 37      | 2439      | 64      | 2466      |
| 11      | 2413      | 38      | 2440      | 65      | 2467      |
| 12      | 2414      | 39      | 2441      | 66      | 2468      |
| 13      | 2415      | 40      | 2442      | 67      | 2469      |
| 14      | 2416      | 41      | 2443      | 68      | 2470      |
| 15      | 2417      | 42      | 2444      | 69      | 2471      |
| 16      | 2418      | 43      | 2445      | 70      | 2472      |
| 17      | 2419      | 44      | 2446      | 71      | 2473      |
| 18      | 2420      | 45      | 2447      | 72      | 2474      |
| 19      | 2421      | 46      | 2448      | 73      | 2475      |
| 20      | 2422      | 47      | 2449      | 74      | 2476      |
| 21      | 2423      | 48      | 2450      | 75      | 2477      |
| 22      | 2424      | 49      | 2451      | 76      | 2478      |
| 23      | 2425      | 50      | 2452      | 77      | 2479      |
| 24      | 2426      | 51      | 2453      | 78      | 2480      |
| 25      | 2427      | 52      | 2454      |         |           |
| 26      | 2428      | 53      | 2455      |         |           |

For more details, refer to the user's manual of the EUT.

Serial number: Prototype

V1.0 Page 6 of 31 Report No.: BZT-15090233URF

#### 2.3. EUT operation mode

| Test Mode(TM) | Description                 | Remark       |
|---------------|-----------------------------|--------------|
| TM1           | Bottom Channel Transmitting | 1            |
| TM2           | Middle Channel Transmitting | 1            |
| TM3           | Top Channel Transmitting    | 1            |
| TM4           | Charging and keeping TX     | power by USB |

The field strength of radiation emission was measured in the following position: EUT stand-up position (Y axis), lie-down position (X, Z axis).

The following data show only with the worst case setup.

The worst case of X axis was reported.

Based on client request, all normal using modes of the normal function were tested but only the worst test data(GFSK) of the worst mode is reported by this report.

Remark: The worst case mode is TM1(1Mbps) reported for unwanted emission and band edge test.

## 2.4. EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

- o supplied by the manufacturer
- supplied by the lab

Notebook PCManufacturer: ACER

Model: V3-572G-59TB

#### 2.5. Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2AF2D-S02 filing to comply with Section 15.249 of the FCC Part 15, Subpart C Rules.

#### 2.6. Modifications

No modifications were implemented to meet testing criteria.

V1.0 Page 7 of 31 Report No.: BZT-15090233URF

## 3. TEST ENVIRONMENT

## 3.1. Address of the test laboratory

BZT Testing Technology Co., Ltd.

1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang Street, Bao'an District, Shenzhen P.R. China

There is one 3m semi-anechoic chamber and two line conducted labs for final test. The Test Sites meet the requirements in documents ANSI C63.10 and CISPR 22/EN 55022 requirements.

#### 3.2. Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### FCC-Registration No.: 701733

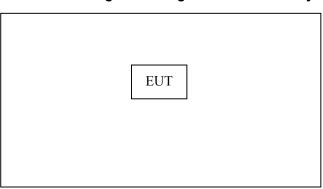

BZT Testing Technology Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 701733.

#### 3.3. Environmental conditions

| During the measurement the environm<br>Temperature: | ental conditions were<br>15-35 ° C | within the listed ranges: |
|---|------------------------------------|---------------------------|
| Humidity:   | 30-60 %                            | -                         |
| Atmospheric pressure:                               | 950-1050mbar                       | _                         |

#### 3.4. Configuration of Tested System

Fig. 2-1 Configuration of Tested System

## 3.5. Statement of the measurement uncertainty

The reported uncertainty of measurement  $\mathbf{y} \pm \mathbf{U}_{\tau}$  where expended uncertainty  $\mathbf{U}$  is based on a standard uncertainty multiplied by a coverage factor of  $\mathbf{k}=2$ , providing a level of confidence of approximately 95 %.

| No. | Item                         | Uncertainty |
|-----|------------------------------|-------------|
| 1   | Conducted Emission Test      | ±1.38dB     |
| 2   | RF power,conducted           | ±0.16dB     |
| 3   | Spurious emissions,conducted | ±0.21dB     |
| 4   | All emissions,radiated(<1G)  | ±4.68dB     |
| 5   | All emissions,radiated(>1G)  | ±4.89dB     |
| 6   | Temperature                  | ±0.5°C      |
| 7   | Humidity                     | ±2%         |

## 3.6. Equipments Used during the Test

Radiation Test equipment

| Item | Kind of Equipment               | Manufacturer | Type No.    | Serial No. | Calibrated until |

## 4. TEST CONDITIONS AND RESULTS

#### 4.1. Conducted Emissions Test

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10.
- 2 Support equipment, if needed, was placed as per ANSI C63.10.
- 3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
- 4 If a EUT received DC power from the USB Port of Notebook PC, the PC's adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5 All support equipments received AC power from a second LISN, if any.
- 6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8 During the above scans, the emissions were maximized by cable manipulation.

The RBW/VBW for 150KHz to 30MHz: 9KHz

#### CONDUCTED POWER LINE EMISSION LIMIT

For unintentional device, according to § 15.207(a) Line Conducted Emission Limits is as following:

| F                  | Maximum RF Line Voltage (dBμV) |      |         |        |  |  |  |  |  |
|--------------------|--------------------------------|------|---------|--------|--|--|--|--|--|
| Frequency<br>(MHz) | CLAS                           | S A  | CLASS B |        |  |  |  |  |  |
| (111112)           | Q.P.                           | Ave. | Q.P.    | Ave.   |  |  |  |  |  |
| 0.15 - 0.50        | 79                             | 66   | 66-56*  | 56-46* |  |  |  |  |  |
| 0.50 - 5.00        | 73                             | 60   | 56      | 46     |  |  |  |  |  |
| 5.00 - 30.0        | 73                             | 60   | 60      | 50     |  |  |  |  |  |

<sup>\*</sup> Decreasing linearly with the logarithm of the frequency

For intentional device, according to §15.207(a) Line Conducted Emission Limit is same as above table.

## 4.2. Transmitter Radiated Unwanted Emissions and Bandedge

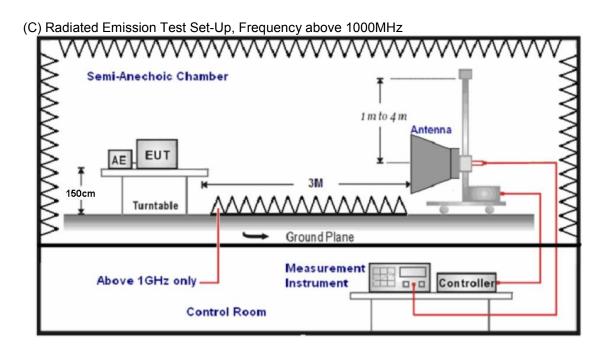

#### **TEST CONFIGURATION**

(A) Radiated Emission Test Set-Up, Frequency Below 30MHz

(B) Radiated Emission Test Set-Up, Frequency below 1000MHz

V1.0 Page 15 of 31 Report No.: BZT-15090233URF

#### FIELD STRENGTH CALCULATION

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

FS = RA + AF + CL - AG

| Where FS = Field Strength | CL = Cable Attenuation Factor (Cable Loss) |
|---------------------------|--|
| RA = Reading Amplitude    | AG = Amplifier Gain                        |
| AF = Antenna Factor       |  |

#### **RADIATION LIMIT**

For unintentional device, according to § 15.209(a), except for Class A digital devices, the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

| Frequency<br>(MHz) | Distance<br>(Meters) | Radiated<br>(dBµV/m) | Radiated<br>(μV/m) |
|--------------------|----------------------|----------------------|--------------------|
| 30-88              | 3                    | 40.0                 | 100                |
| 88-216             | 3                    | 43.5                 | 150                |
| 216-960            | 3                    | 46.0                 | 200                |
| Above 960          | 3                    | 54.0                 | 500                |

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emissions from intentional radiators at a distance of 3 meters shall not exceed the above table.

#### **TEST PROCEDURE**

- 1. The EUT is placed on a turntable, which is 0.8m above ground plane below 1GHz and 1.5m above ground plane above 1GHz.
- 2. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.
- 3. EUT is set 3m away from the receiving antenna, which is varied from 1m to 4m to find out the highest emissions.
- 4. For the radiated emission test above 1GHz: Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.
- 5. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 6. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 7. Repeat above procedures until the measurements for all frequencies are complete.
- 8. Based on the Frequency Generator in the device include 16MHz. The test frequency range from 9KHz to 25GHz per FCC PART 15.33(a).

#### Note:

Three axes are chosen for pretest, the X axis is the worst mode for final test. For battery operated equipment, the equipment tests shall be performed using a fully-charged battery.

V1.0 Page 16 of 31 Report No.: BZT-15090233URF

#### **TEST RESULTS**

All the test modes (TM1, TM2, TM3 and TM4) completed for test. The worst case of Radiated Emission is TM1; the test data of this mode was reported.

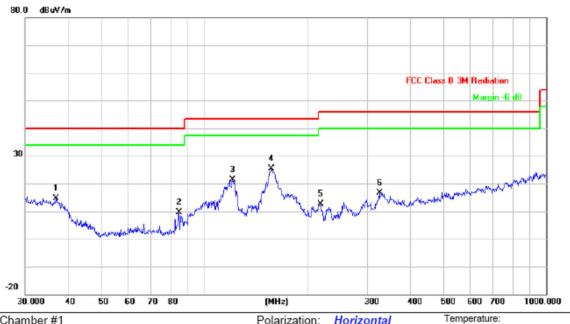

#### 9KHz-30MHz:

| Freq. | Level  | Over Limit | Limit Line | Remark   |
|-------|--------|------------|------------|----------|
| (MHz) | (dBuV) | (dB)       | (dBuV)     |          |
|       | -      |            |            | See Note |

Note: The amplitude of spurious emissions that are attenuated by more than 20dB below the permissible value has no need to be reported.

Dstance extrapolation factor= 40 log (specific distance/ test distance) (dB); Limit line= specific limits (dBuV) + distance extrapolation factor.

Report No.: BZT-15090233URF

Note: above 10GHz up to 25GHz was verified, and no any emission was found except system noise floor.

# 4.3. Occupied Bandwidth Measurement

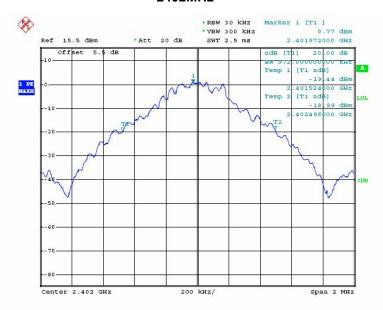

#### **Measurement Procedure**

- 1. Set EUT as normal operation.
- 2. RBW  $\geq$  1% of the 20 dB bandwidth, VBW  $\geq$  RBW.
- 3. The useful conducted emission from the EUT was detected by the spectrum analyser with peak detector.

#### **Measurement Results**

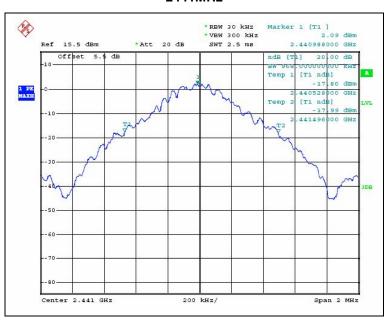

#### GFSK:

#### 2402MHz

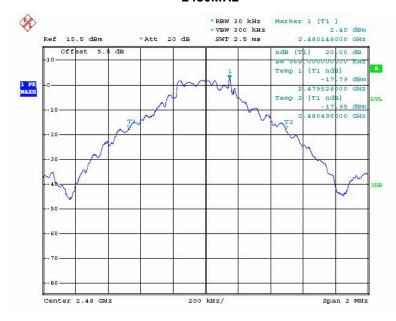

20dB Bandwidth: 972 KHz

#### 2441MHz

20dB Bandwidth: 968 KHz

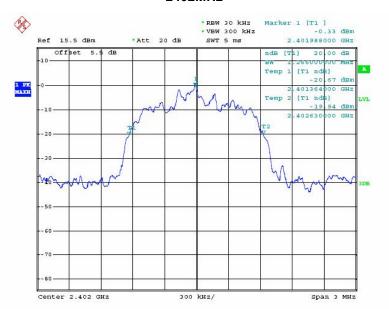

#### 2480MHz

20dB Bandwidth: 968 KHz

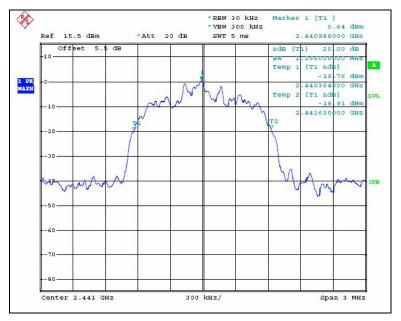

#### 8DPSK mode:

#### 2402MHz

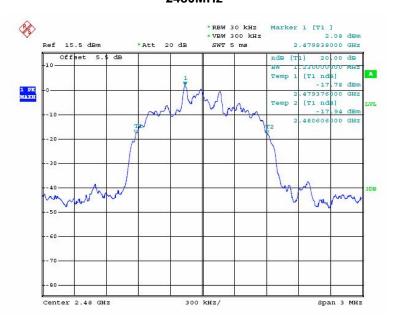

20dB Bandwidth: 1266 KHz

#### 2441MHz

20dB Bandwidth: 1266 KHz

#### 2480MHz

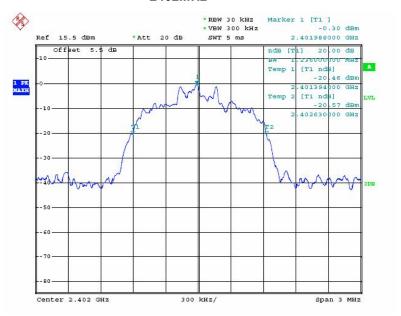

20dB Bandwidth: 1230 KHz

V1.0 Page 24 of 31 Report No.: BZT-15090233URF

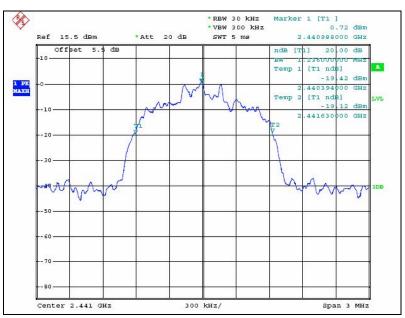

#### π/4DQPSK mode:

#### 2402MHz

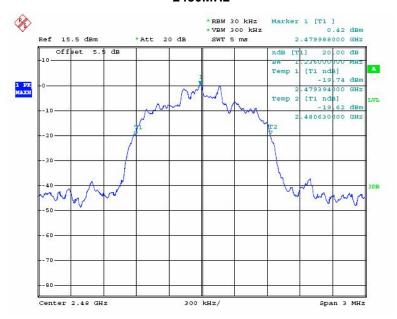

20dB Bandwidth: 1236 KHz

#### 2441MHz

20dB Bandwidth: 1236 KHz

#### 2480MHz

20dB Bandwidth: 1236 KHz

V1.0 Page 26 of 31 Report No.: BZT-15090233URF

## 5. Antenna Requirement

#### **Standard Applicable**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (c), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

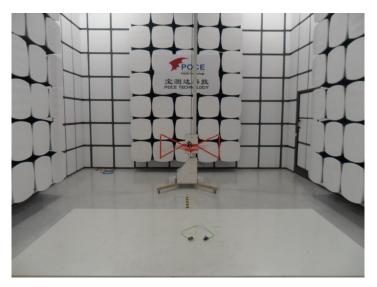

#### Refer to statement below for compliance.

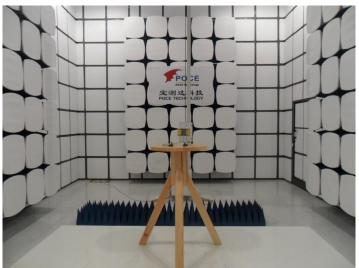

The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

#### **Antenna Connected Construction**

The antenna used in this product is an internal Antenna, The directional gains of antenna used for transmitting is 0 dBi.

# 6. Test Setup Photos of the EUT

V1.0 Page 28 of 31 Report No.: BZT-15090233URF

# 7. External and Internal Photos of the EUT

## **External Photos of EUT**

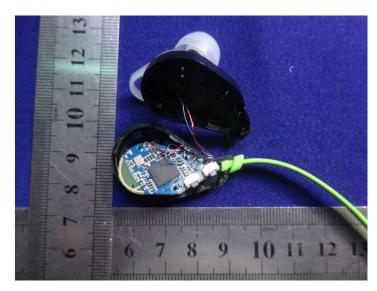

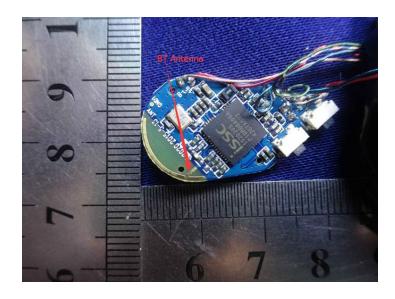

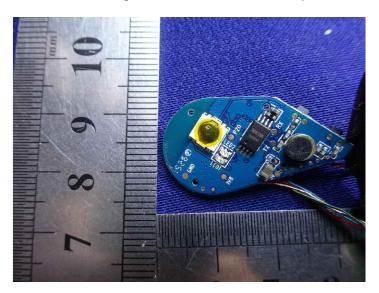

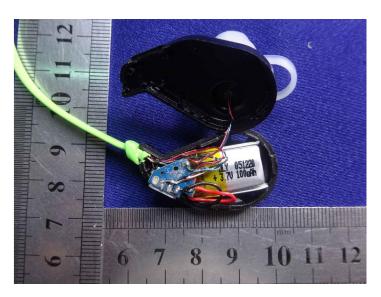

## **Internal Photos of EUT**
