

## SAR test exclusion

FCC ID: 2AG65-IC-HSC001

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances  $\leq 50$  mm, the SAR test exclusion threshold is determined according to the following;

a)  $[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \times [\sqrt{f(\text{GHz})}] \leq 3.0$

### 1. SAR test exclusion threshold

Frequency : 2 402 MHz (min. separation distances = 5 mm)

SAR test exclusion thresholds(6 mm) =  $[(1.06 / 5) * \sqrt{2.402}] = 0.329 \leq 3.0$ .

Mode	Frequency (MHz)	Maximum Allowed Power (mW)	Separation Distance (mm)	$\leq 3.0$
Bluetooth	2 402	1.06	5	0.329

2. Conclusion : Bluetooth SAR was not required
