AMP 6500 Quick Reference Guide 3 General Precautions Basic care and consideration should be used when handling, operating or installing the 6500 terminal. This is a secure device, with both physical and logical tamper protection, and no attempt should be made by the user to open or service the device in any way other than approved troubleshooting methods. Keep these basic guidelines in mind to prolong the longevity and functionality of your product: - Do not use the non-dedicated power supply, because it may be in trouble due to the mismatch of power. - Do not vibrate, shake or knock the product sharply. - When a fault occurs, immediately turn off the power supply and discontinue to use the product, please contact the service sector related to our company. - Do not open and repair it by yourself When the terminal being attacked by unscrupulous environment (such as opening the terminal shell, etc.), the internal sensitive information stored in the terminal will be erased. For avoiding unnecessary trouble, you should not open the housing. - AMP 6500 is designed to be unattended terminals, it is used outdoors. Please follow as below: - The device should be covered by a pin shield over the pin entry area. - Avoiding the direct sunlight and the rain. - Place the device in a ventilated locality and keep good a heat dissipation condition. AMP 6500 Quick Reference Guide 4 Powering Device On/Off Powering On the device First ensure that the plug is inserted into a known working socket, then insert the Microfit power or MIOB power jack into the power port on the 6500, the device will then power itself on. Powering Off the device Unplug the DC jack from the back of the terminal and it will power itself off.	AMP 6500 Quick Reference Guide 4 Powering Device On/Off Powering On the device First ensure that the plug is inserted into a known working socket, then insert the Microfit power or MIOB power jack into the power port on the 6500, the device will then power itself on. Powering Off the device Unplug the DC jack from the back of the terminal and it will power itself off. Do not attempt to open the terminal or make further repairs. CAUTION RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS	Problem	Troubleshooting	Nothing displayed on screen	Ensure the power is properly connected at the socket and DC jack	Unable to read card	Ensure that the slot is free of debris or foreign objects Switch the card in both directions, and check if error has been corrected Check if the current card is operational and test with a different card	Magnetic reader data read error	Switch the card with constant speed, light to the bottom edge of the slot Ensure the card strip is facing the screen and aligned properly with the slot Try swiping the card in the opposite direction	Chip and card read error	Ensure the chip portion is facing upwards, and is properly inserted into the slot Check the card for excessive scratches, dirt or other damage	Contactless card data read error	Confirm that the card supports contactless communication Check whether the card is properly aligned above the contactless reader area	Communication error	Restart the terminal in order to re-establish communications Confirm that the SIM card is properly installed, and that its contacts are clean Flaring WiFi, check that the terminal's connection is enabled																																																												
Problem	Troubleshooting																																																																																																							
Nothing displayed on screen	Ensure the power is properly connected at the socket and DC jack																																																																																																							
Unable to read card	Ensure that the slot is free of debris or foreign objects Switch the card in both directions, and check if error has been corrected Check if the current card is operational and test with a different card																																																																																																							
Magnetic reader data read error	Switch the card with constant speed, light to the bottom edge of the slot Ensure the card strip is facing the screen and aligned properly with the slot Try swiping the card in the opposite direction																																																																																																							
Chip and card read error	Ensure the chip portion is facing upwards, and is properly inserted into the slot Check the card for excessive scratches, dirt or other damage																																																																																																							
Contactless card data read error	Confirm that the card supports contactless communication Check whether the card is properly aligned above the contactless reader area																																																																																																							
Communication error	Restart the terminal in order to re-establish communications Confirm that the SIM card is properly installed, and that its contacts are clean Flaring WiFi, check that the terminal's connection is enabled																																																																																																							
Problem	Troubleshooting																																																																																																							
Nothing displayed on screen	Ensure the power is properly connected at the socket and DC jack																																																																																																							
Unable to read card	Ensure that the slot is free of debris or foreign objects Switch the card in both directions, and check if error has been corrected Check if the current card is operational and test with a different card																																																																																																							
Magnetic reader data read error	Switch the card with constant speed, light to the bottom edge of the slot Ensure the card strip is facing the screen and aligned properly with the slot Try swiping the card in the opposite direction																																																																																																							
Chip and card read error	Ensure the chip portion is facing upwards, and is properly inserted into the slot Check the card for excessive scratches, dirt or other damage																																																																																																							
Contactless card data read error	Confirm that the card supports contactless communication Check whether the card is properly aligned above the contactless reader area																																																																																																							
Communication error	Restart the terminal in order to re-establish communications Confirm that the SIM card is properly installed, and that its contacts are clean Flaring WiFi, check that the terminal's connection is enabled																																																																																																							
Problem	Troubleshooting																																																																																																							
Nothing displayed on screen	Ensure the power is properly connected at the socket and DC jack																																																																																																							
Unable to read card	Ensure that the slot is free of debris or foreign objects Switch the card in both directions, and check if error has been corrected Check if the current card is operational and test with a different card																																																																																																							
Magnetic reader data read error	Switch the card with constant speed, light to the bottom edge of the slot Ensure the card strip is facing the screen and aligned properly with the slot Try swiping the card in the opposite direction

AMP 6500 Quick Reference Guide 8 Powering Device On/Off Powering On the device First ensure that the plug is inserted into a known working socket, then insert the Microfit power or MIOB power jack into the power port on the 6500, the device will then power itself on. Powering Off the device Unplug the DC jack from the back of the terminal and it will power itself off.
