## 1 Introduction and Conclusion

The tests indicated in section 2.0 were performed on the product constructed as described in section 4.0. The remaining test sections are the verbatim text from the actual data sheets used during the investigation. These test sections include the test name, the specified test Method, a list of the actual Test Equipment Used, documentation Photos, Results and raw Data. No additions, deviations, or exclusions have been made from the standard(s) unless specifically noted.

Based on the results of our investigation, we have concluded the Handheld Remote was exempt from the SAR testing outlined in FCC Title 47 CFR § 2.1093 and RSS-102 Issue 5. Intertek does not make any claims of compliance for samples or variants which were not tested.

## 5 Duty Cycle Calculation

The device is a frequency hopping spread spectrum (FHSS) transmitter. The time to repeat the hopping sequence was measured to be 277.5ms:

The device utilizes 37 unique hopping channels once per hopping sequence, for an occupation time of  $277.5\text{ms} / 37 = 7.5\text{ms}$  per hopping channel. At each hopping channel, the total transmit time was measured to be  $184.5\mu\text{s}$ :

$$(92.4\mu\text{s} - 0\mu\text{s}) + (322.8\mu\text{s} - 230.7\mu\text{s}) = 184.5\mu\text{s} = 0.1845\text{ms}$$

Therefore the average duty cycle is calculated as  $0.1845\text{ms} / 7.5\text{ms} = 0.0246 = \mathbf{2.46\%}$

### 6.1 Test Limits

**§ 1.1310:** The criteria listed in table 1 shall be used to evaluate the environmental impact of human exposure to radiofrequency (RF) radiation as specified in §1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of §2.1093 of this chapter.

#### Part 1.1310 Limits for Maximum Permissible Exposure (MPE)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm <sup>2</sup> )	Averaging time (minutes)

NOTE 1 TO TABLE 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

NOTE 2 TO TABLE 1: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.
