Subject: Exemption from routine evaluation for RF Exposure

Dear TCB,

The KDB447498 D01 V6 exclusion threshold for exempting a device from routine evaluation when the output frequency is 13.56MHz and the minimum separation distance is 5mm or less is **237mW**.

This device has a maximum output power of **48mW** (refer to the NFC chipset specification sheet uploaded as part of the operational description exhibits) and is therefore exempt from routine evaluation

Sincerely,

Charles Moody
