Frequently asked questions and answers

Q: Why can not I wear a watch to take a hot bath?

A: The bath water temperature is relatively high, it will produce a lot of water vapor, and the water vapor is in the form of gas. Its molecular radius is small, so it is easy to infiltrate into the gap of the watch's casing, and once the temperature drops, water vapor will re-condense into liquid. It is easy to cause short circuit inside the watch, hence damaging the watch circuit board and the watch itself.

Q: Why can not the watch receive the message push?

1. Confirm the message push switch is enabled on the APP.
2. The confirmation message can be displayed normally in the mobile phone notification bar. The watch message push is pushed by reading the mobile phone notification bar message. If there is no message in the mobile phone notification bar, the watch will not be able to receive the push need to find the notification setting and open notifications for Wechat, SMS, WhatsApp, Twitter etc. on the phone APP.

FCC statement

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: 1) this device may not cause harmful interference, and 2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

FCC Radiation Exposure Statement

This device complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
