

G117P38MO6C Instruction

This product has 6 kinds of color temperature adjustment and sensing functions, and the whole lamp is compatible with 120V track dimming function. The adjustment of different color temperatures is realized by the rotating ring on the lamp body, and the sensing function is realized by the internal module.

Through the Doppler effect, the module can detect the frequency and intensity of the waveform reflected by the moving object, so as to determine whether there is a moving object entering the sensing range, and realize the function of turning on the lights when people come and turning off the lights when people go. At the same time, a photosensitive sensor is added to detect the brightness of the environment. , Realize the function of people coming to light up the lights during the day and people coming to light up the lights at night.

Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

FCC Statement:

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.
