Please check the files in File Explorer when you play in your USB.

Wireless screen (Windows)

Windows with screen operation guide

1. Please confirm your Windows and projector IP addresses are connected to the same LAN.

2. Use the following link to download and install：http://cdn.sharemax.cn/app/EShareClient-STD.exe

3. Click Esharecent-STD, and the name and IP address of the projection device will appear. Click "Start Screen Transmission" to begin using the wireless screen.
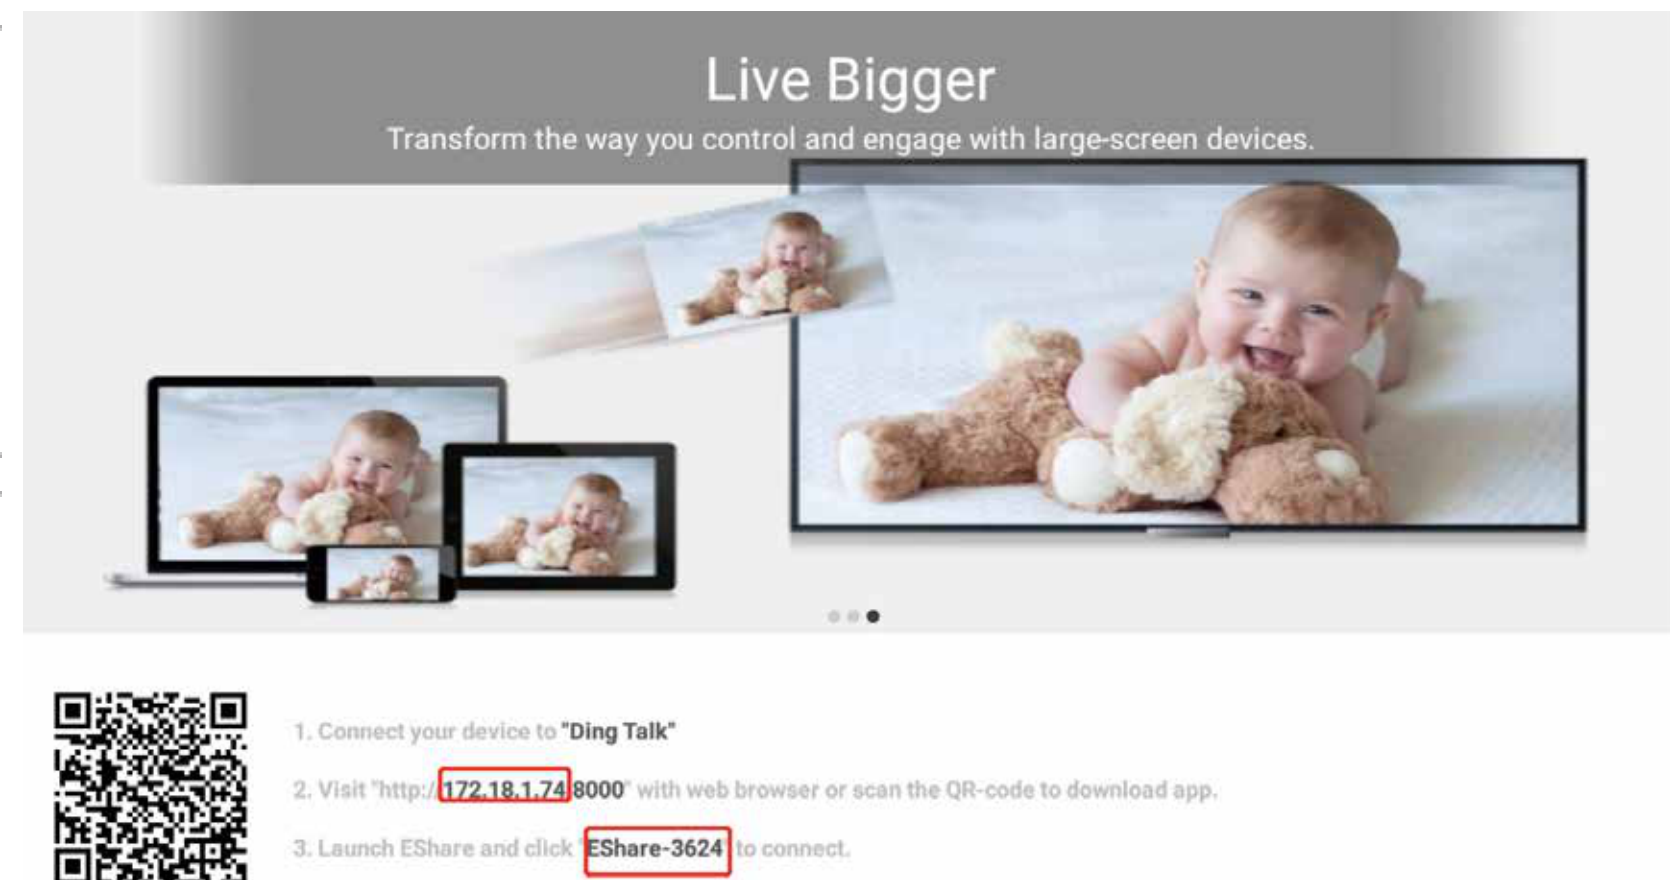

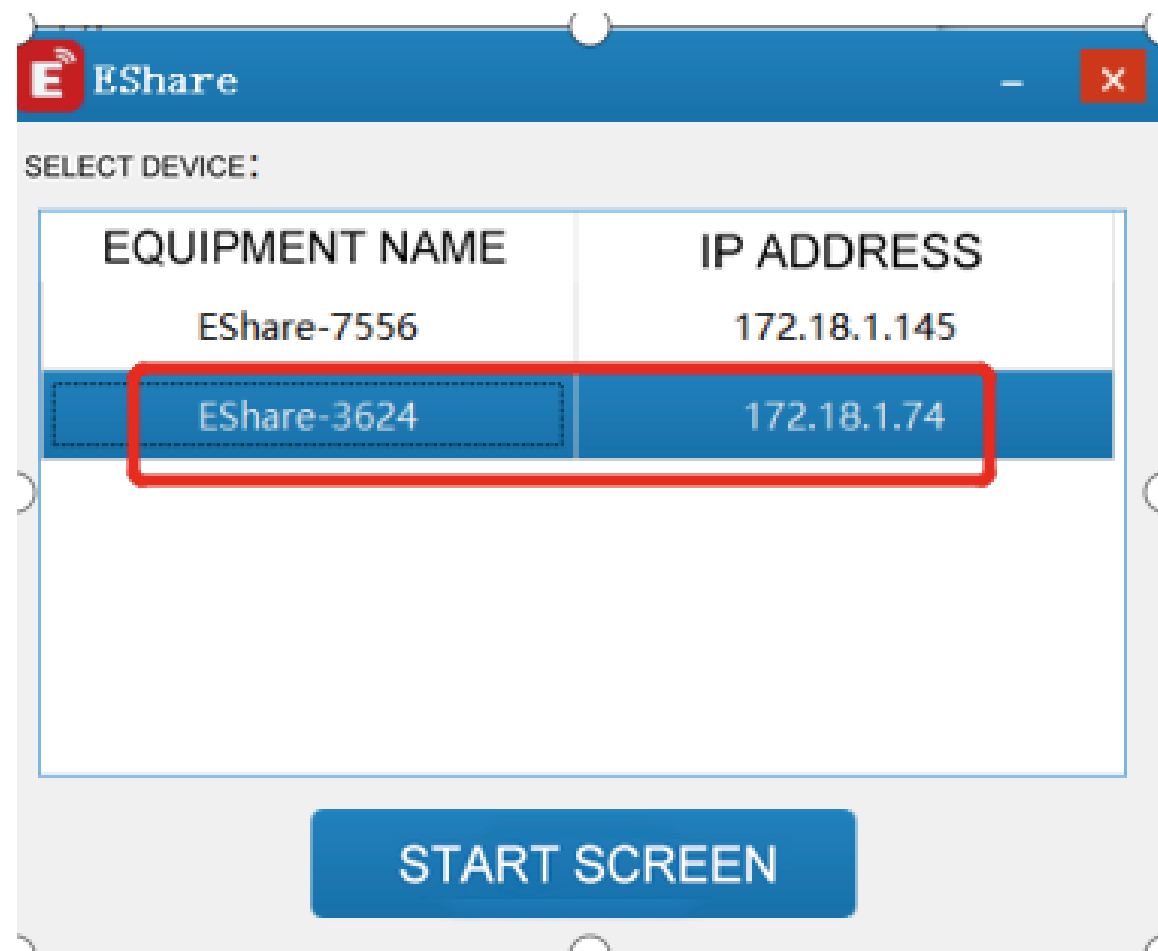

Airplay (iPhone)

IPhone AirPlay mirror operation guide

Supported by the following devices: iPhone 5 and above, iPad 2 and above, iPod Touch (5th generation and above).

1. Connect your iPhone and projector to the same --WIFI-- network (5G first)
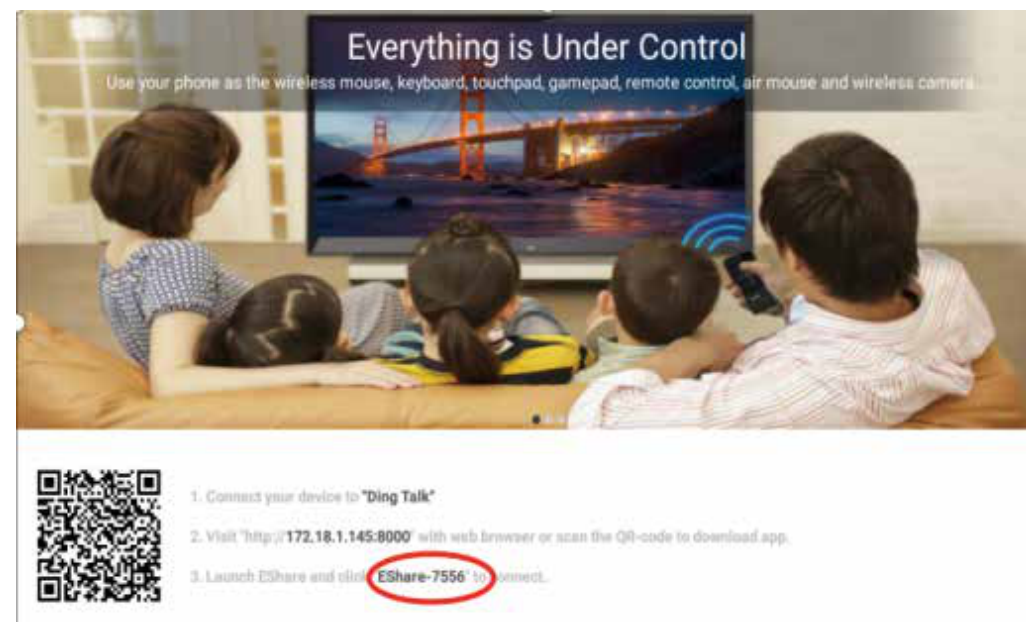

Airplay (iPhone)

IPhone AirPlay mirror operation guide

Supported by the following devices: iPhone 5 and above, iPad 2 and above,
iPod Touch (5th generation and above).

2. Click to open the projected Airplay, and then Eshare-**** will be displayed in the lower left corner.

3. Slide your finger from the bottom of the iPhone screen to the top, bringing up a new menu,
 and open the iPhone control center (Slide from the top down for iPhone X),

4. Click AirPlay Mirroring and the device list will automatically search for the projected devices
within the same network

5. From the device list, click the name of the projected device you want to connect to (Eshare-****) to
 successfully cast the screen.

Airplay (iPhone)

Use mobile hotspot for AirPlay mirror operation guide

1. For use without having a LAN or wifi available, first turn on "Settings" -- "Personal Hot spot" -- "Allow others to join" on the iPhone, select and turn on

2. Click "Settings" of the projector -- turn on "WIFI", search for the hotspot name of iPhone, and find and connect.

3. Swipe your iPhone from the bottom up and open the iPhone control center (Slide from the top down for iPhone X).

4. Click "AirPaly Mirroring" and the device list will automatically search for the internal projection device in the same network.

5. From the device list, click the name of the projected device you want to connect to (Eshare-****) to successfully cast the screen

IPhone AirPlay **reverse**

Screen Projection operation Guide

1. Click to open the projected Airplay, then follow the prompts on the page to scan the QR code of your iPhone, download and install the corresponding Eshare APP.
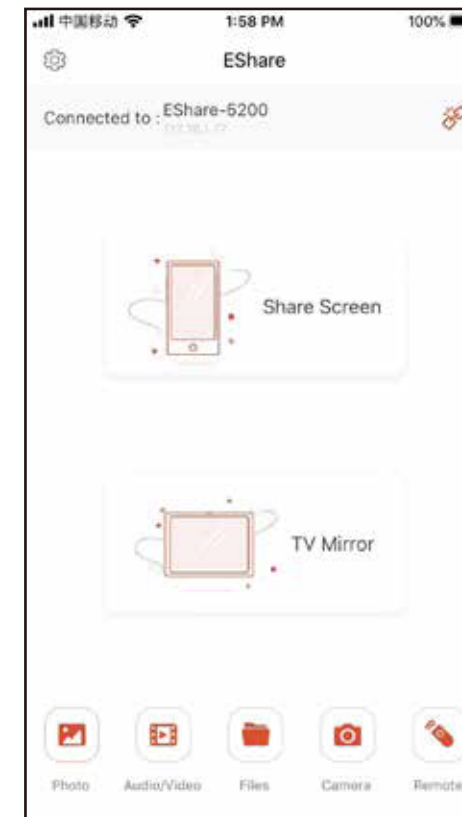

2. Open the Eshare app on the mobile phone, and the device list will automatically search for the internal projection device of the same network.

3. Click the projection device (Eshare-****), "one-click screen transmission" and "Reverse screen transmission" will appear simultaneously.

4. Click "Reverse Screen Transmission".

Wired Same Screen (iPhone)

1. It is best to connect the projector to the phone using the original Apple phone data cable;
2. The iPhone will pop up a "Trust" window, click "Trust" and enter the unlock password to automatically achieve the same screen

Wired same screen (Android phone)

1. Download and install "EShare" software using a mobile phone that requires screen projection
2. Connect the projector to the phone using the original USB data cable
3. Open the installed "EShare" and a pop-up window will display whether to cast the screen. Click OK to successfully cast the screen.
(If "EShare" requires permissions such as "Display on top of the phone", you need to agree and enable this permission for "EShare".)

Android Miracast operation guide

1 The android phone and the projector connect the WIFI.

**2** Enter settings and click miracast.
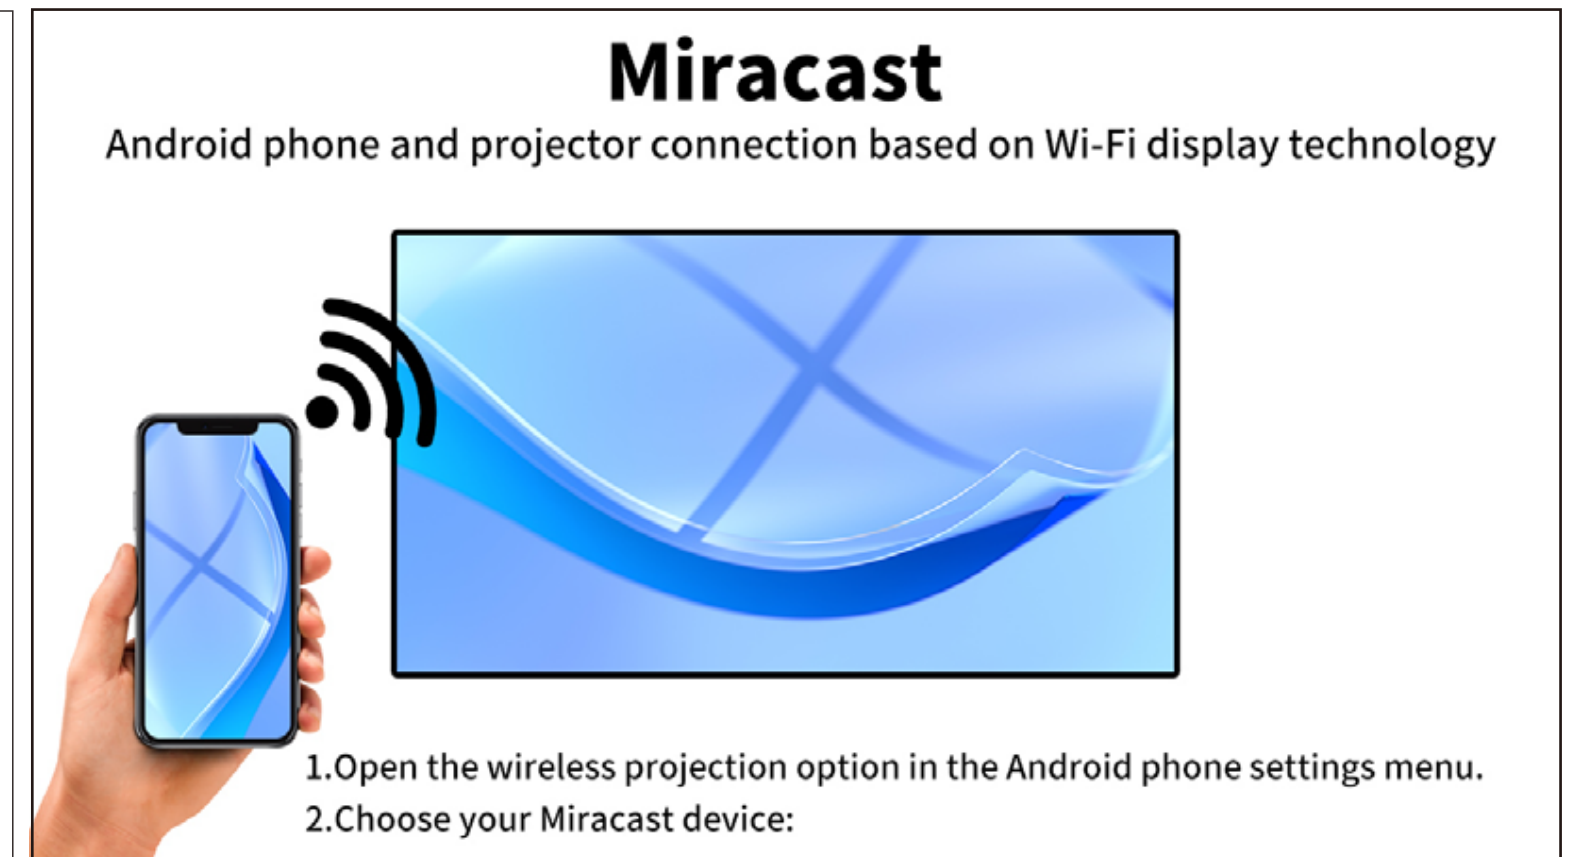

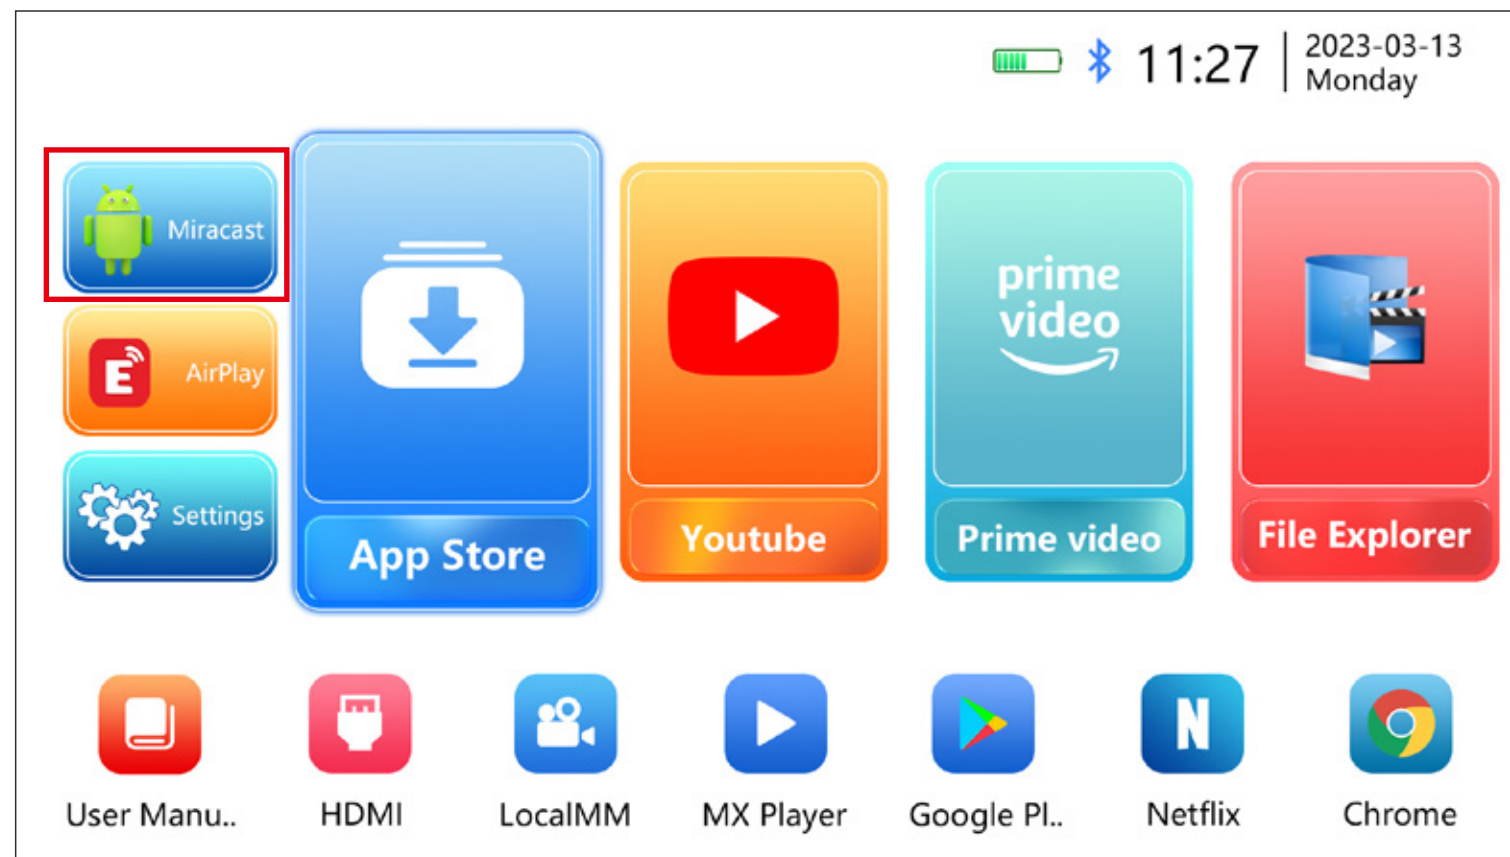

Android Miracast operation guide

③ Open "More Connections or Screen Projection for Android Phone" on the mobile phone（there are a variety of models of Android mobile phones which may have different names, and the mobile phone to be referred is HUAWEI mobile phone).

④ The phone and projector will seach for same model in a few seconds and connect successfully.
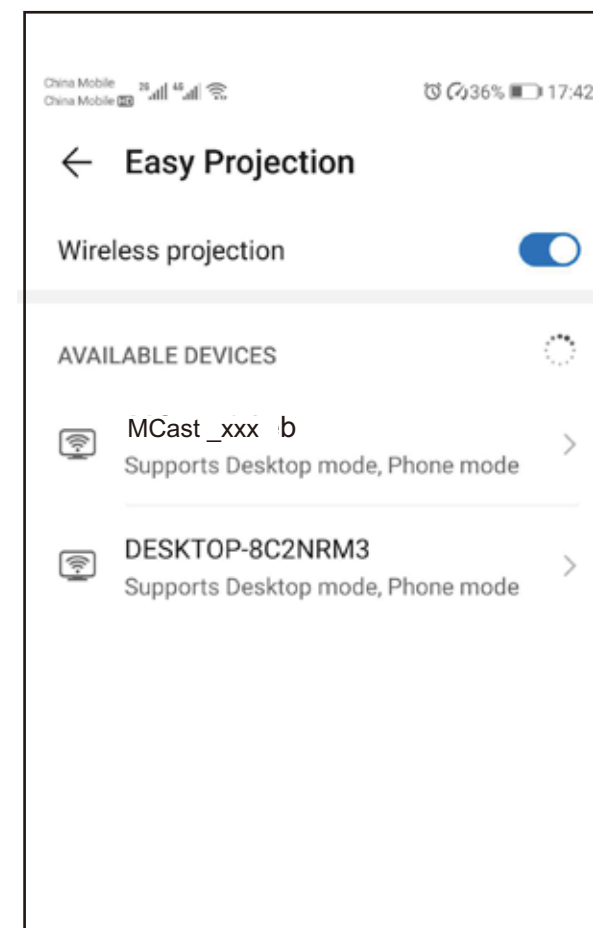

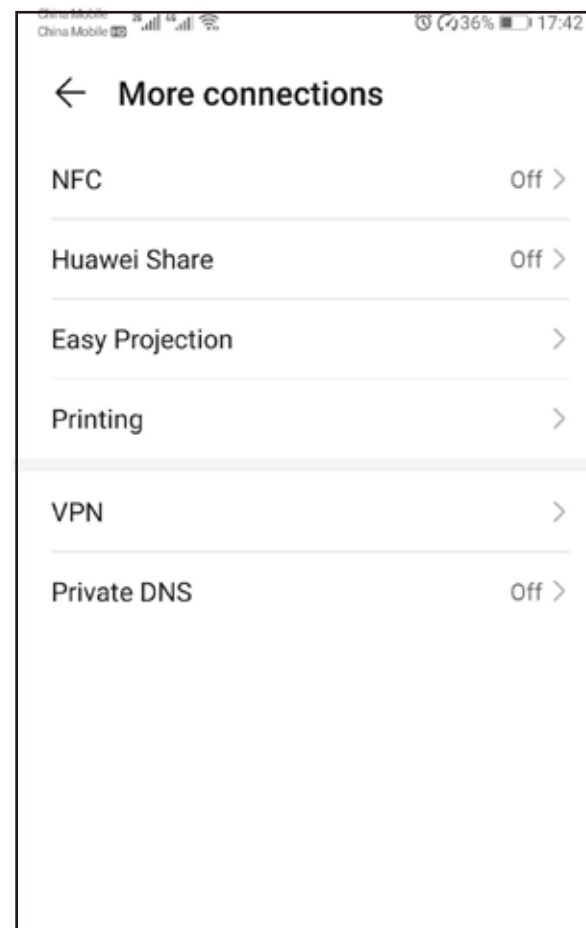

How to play 3D movies

For the 3D glasses, only use LCD Active Shutter 3D glasses. Please remember to charge the glasses prior to first time use.

Select the correct video format, open the 3D video on the projector, and then open the 3D settings in the settings. Here, you will see two options, left and right video format (SBS) and up and down (TB) video format.
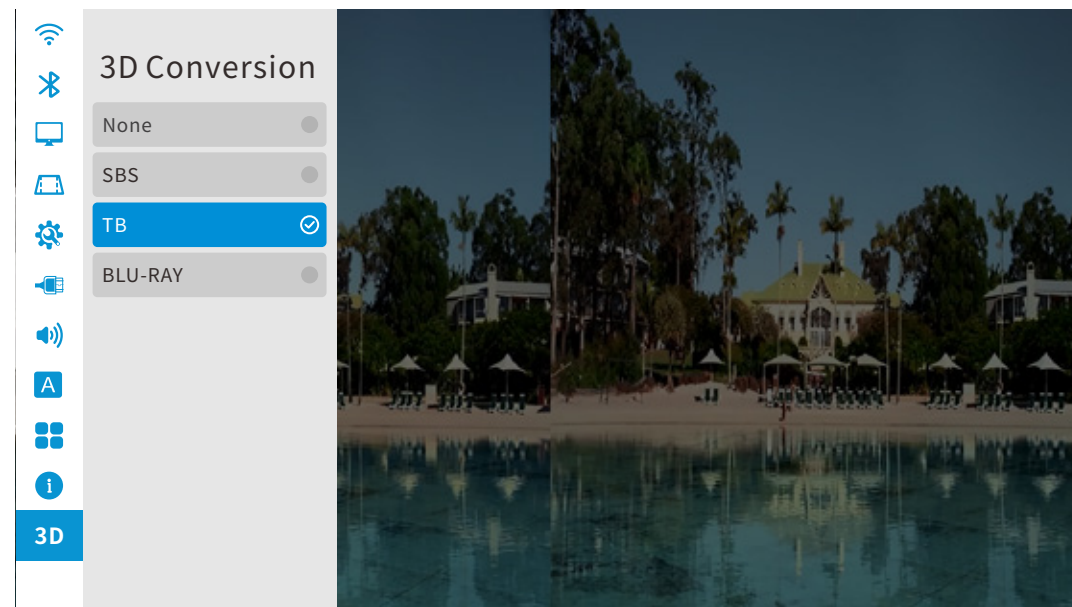

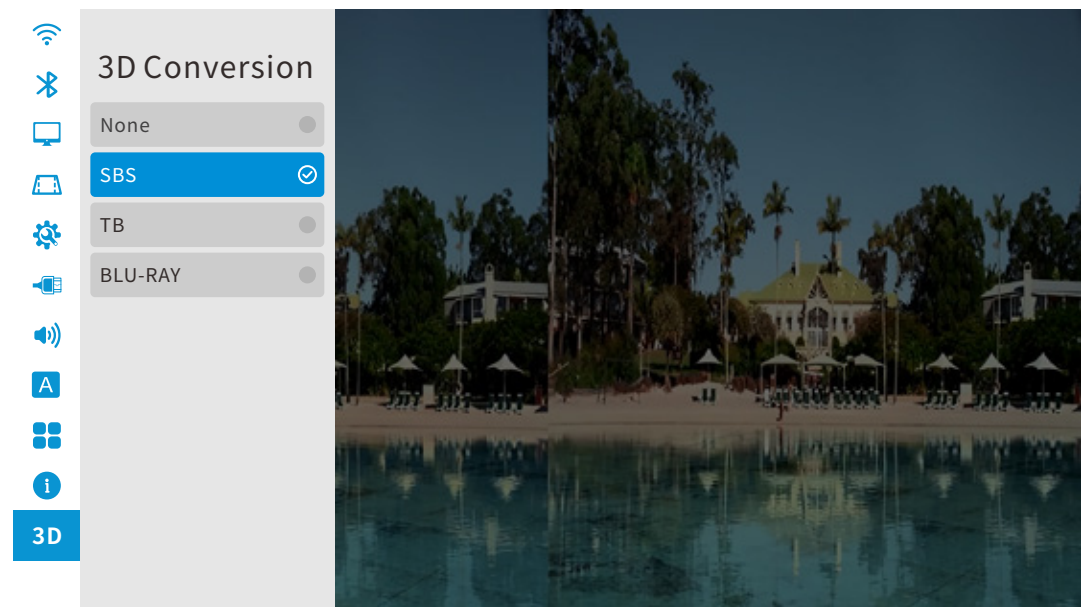

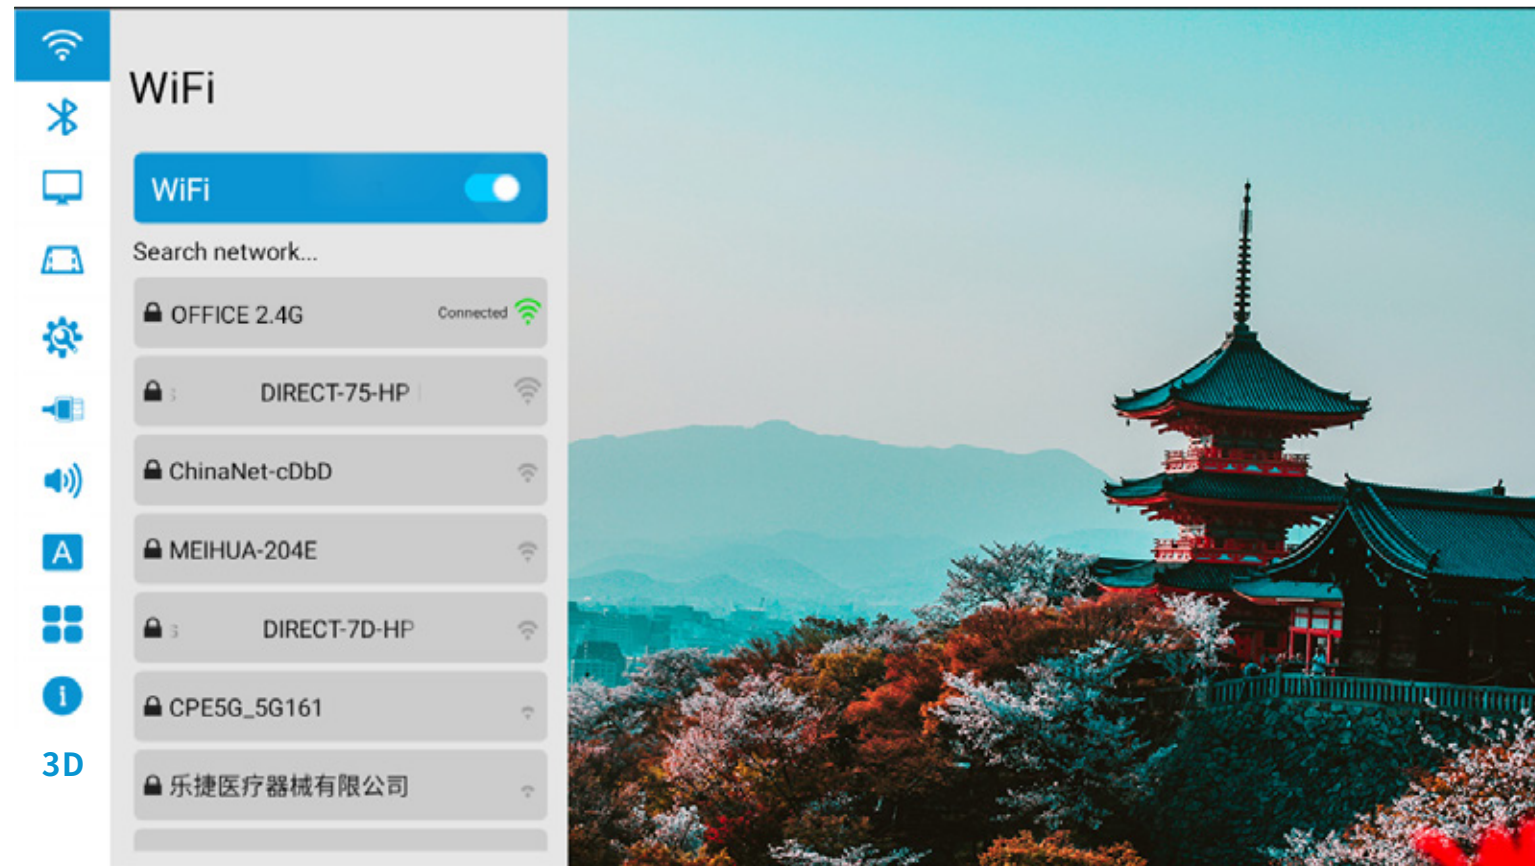

How to play 3D movies

Example: For a SBS video, you need to choose the SBS option after you press the 3D button.
For a TB video you will need to choose the TB option after you press the 3D button.
