Solder Board-Component View 10	 A photograph of a small green printed circuit board (PCB) component, identified as View 10. The component is rectangular and features several surface-mounted components, including a black integrated circuit (IC) in the center, a red circular component on the right, and a green component on the left. Two yellow wires are soldered to the top of the board. The component is placed on a blue textured surface next to a black L-shaped ruler with white millimeter markings for scale.
Solder Board-Component View 11	 A photograph of the same green PCB component, identified as View 11. This view shows the component from a slightly different angle, highlighting the underside of the IC and the red circular component. The yellow wires are still visible. The component is placed on the same blue textured surface next to the same black L-shaped ruler for scale.

Solder Board-Component View 12	 A photograph of a small green printed circuit board (PCB) component, identified as View 12. The component is rectangular and features several surface-mounted components, including a large black integrated circuit (IC) in the center, a red circular component on the right, and various smaller resistors and capacitors. Two yellow wires are soldered to the top of the board. The component is placed on a blue textured surface next to a black L-shaped ruler with white millimeter markings for scale.
Solder Board-Component View 13	 A photograph of the same green PCB component, identified as View 13. This view shows the opposite side of the board. It features a large black IC, a red circular component, and various other electronic components. Two yellow wires are soldered to the top. The component is placed on a blue textured surface next to a black L-shaped ruler with white millimeter markings for scale.

Solder Board-Component View 14	 A photograph of a small green printed circuit board (PCB) component mounted on a blue textured surface. The component is positioned next to a black L-shaped ruler with white markings in millimeters. The ruler's vertical scale ranges from 0 to 100 mm, and the horizontal scale ranges from 0 to 100 mm. The component is located approximately at the 10 mm mark on the vertical scale and the 20 mm mark on the horizontal scale. The component has a green body with a blue section on the right side.
Solder Board-Component View 15	 A photograph of the same green PCB component from a different angle, showing its profile. It is placed next to the same black L-shaped ruler on the blue textured surface. The component is positioned at approximately the 10 mm mark on the vertical scale and the 20 mm mark on the horizontal scale. This view highlights the component's thickness and the connection points on its sides.

Solder Board-Component View 16	 A photograph of a green printed circuit board (PCB) component, labeled 'View 16', placed on a blue textured surface. The component is rectangular with several electronic components soldered onto it, including two large yellow electrolytic capacitors, several smaller silver and blue capacitors, and a blue integrated circuit. A black L-shaped ruler is positioned next to the component for scale, showing measurements in millimeters. The ruler's vertical scale ranges from 0 to 100 mm, and the horizontal scale ranges from 0 to 100 mm.
Solder Board-Component View 17	 A photograph of the same green printed circuit board (PCB) component, labeled 'View 17', showing the reverse side. The component is placed on a blue textured surface. A black L-shaped ruler is positioned next to it for scale, showing measurements in millimeters. The ruler's vertical scale ranges from 0 to 100 mm, and the horizontal scale ranges from 0 to 100 mm. The reverse side of the PCB shows various solder joints, pads, and some small components.
