Re: Class II Permissive Change for ABZ89FC4825, UHF Range 2 MTR3000 Base Radio Transmitter  
Addition of FCC Rule Part 22

This memo is in regards to Motorola Solutions type approved transmitter, equipment type ABZ89FC4825, originally approved December 9, 2009. It was updated with additional emission designators on September 8, 2011.

A copy of the current FCC grant is included.

Motorola Solutions requests to have FCC rule part 22 added onto the grant. Since the technical requirements in part 22 are similar or less stringent than those in part 90, no emissions data or occupied bandwidth information is included with this request. Please refer to information on file, as needed.

No schematic, active device, or circuitry changes have been made to the equipment. This proposed change maintains the existing specifications of the equipment. The equipment will be completely compatible and interchangeable with the existing equipment currently shipped under equipment type ABZ89FC4825. The form, fit, and function of the base radio is identical to the equipment that is currently in production.

Please contact me if you need further information or have any issues or questions.
