Attestation statements for portable device

Based on the product ( Model No. HID-B7 & HID-B70) design as documented in the user manual, this device has ear phone jack for listening to the music and also supports touch screen function. Though the distance from antenna to the body is more than 20cm at standing position, however, during the real operation as listening the music or review the photos, it may be placed to the laptop and which may be considered as the most conservative position and per 2.1093, when the separation distance of antenna-to-user is less than 20cm and average output power is higher than the power threshold (60/f), SAR evaluation may be required.

Sincerely,

By:
