

RF Exposure / SAR Statement

No. : 29BE0117-YK-E

Applicant : Sony Corporation
Type of Equipment : Bluetooth Audio System
Model No. : MEX-BT3700U
FCC ID : AK8MEXBT3700

Sony Corporation declares that Model : Bluetooth Audio System complies with FCC radiation exposure requirement specified in the FCC Rules 2.1091. The "MEX-BT3700U" has 1.08 mW of conducted Peak Output power and 1.08 mW of EIRP. This equipment is considered as a mobile device so that SAR testing is excluded. The Following calculation is the reference data for 20cm distance.

RF Exposure Calculations:

The following information provides the minimum separation distance for the highest gain antenna provided with the "MEX-BT3700U" as calculated from FCC OET Bulletin 65 Appendix A, Table (B) Limits for General Population / Uncontrolled Exposure. This calculation is based on the highest EIRP possible from the system, considering maximum power and antenna gain, and considering a 1.0mW/cm² uncontrolled exposure limit. The Friis formula used was:

$$S = (P * G) / (4 * \pi * r^2)$$

Where

P = 1.08 mW (Maximum peak output power)
G = 1.00 Numerical Antenna gain; equal -0.01 dBi
r = 20.0 cm

For: MEX-BT3700U

$$S = 0.00021 \text{ mW/cm}^2$$
