

Exhibit J : Emission Designator

- (1) The emission designator is 110KF3E.
- (2) At modulation versus the modulation input voltage in the test report, signal that deviation is +/- 40KHz or more is in distorted condition.
- (3) The test data submitted modulation input voltage is just for reference, because of modulation limiting is not employed for WRT807B.
- (4) Test data of the modulation versus the modulation input voltage was provided for determination of measurement condition of occupied bandwidth.
- (5) The occupied bandwidth measurement was carried out on condition of 85% modulation and the result was within emission limit of Sec.74.861.
