RF Exposure Compliance

This equipment has been tested and meets applicable limits for radio frequency (RF) exposure. Specific Absorption Rate (SAR) refers to the rate at which the body absorbs RF energy. The SAR limit is 1.6 watts per kilogram in countries that set the limit averaged over 1 gram of tissue. During testing, device radios are set to their highest transmission levels and placed in positions that simulate use near the body, with 0mm separation. Cases with metal parts may change the RF performance of the device, including its compliance with RF exposure guidelines, in a manner that has not been tested or certified. Cet équipement a été testé et respecte les limites applicables d'exposition aux radiofréquences (RF). Le débit d'absorption spécifique est la vitesse à laquelle le corps absorbe l'énergie radiofréquence.
