

The reasons for not putting FCC/IC TA info on the product label

23.2mm X 18.6mm X 16.2mm 	- Models OTE150R/OTE150L are very small and curved. - Due to the surface treatment of OTE150R/OTE150L, it is more complex to do printing and due to this the scrap will increase significantly and make it unreasonable expensive to print on the headset - FCC ID/IC ID will be included in the printed user manual and on the outer surface of the product box, - Marking on top surface would ruin the product design in a way so that the product would not be attractive to customers
Meet the app  Jabra Sport Life Customize earbud settings Manage your workouts with real-time coaching Test and analyze your fitness level Available on the App Store Get it on Google play	OTE150R/OTE150L will use accompanying app (Jabra Sport life app) with cell phone (evidence as attached below). E labeling will be extended to devices with a cell phone screen, which can display the regulatory info (such as the FCC /IC identification number, TELEC mark and ID, safety warnings etc.). The use of electronic labelling rather than permanent physical labels reduces costs for manufacturers as well.

The following pages shows the way through the App menu (About -> Technical info -> Regulatory information).

This guidance will be added to the online documentation for Elite 2 /Elite 3.
