Before using iPhone, review the iPhone User Guide at support.apple.com/guide/iphone. Retain documentation for future reference.

Hearing Aid Compatibility (HAC)

iPhone is hearing aid compatible as determined by ANSI C63.19-2019. This iPhone supports volume control with a conversational gain of 14 dB with hearing aids, and 17 dB without hearing aids.

Note: The 2019 ANSI C63.19 standard does not use M (for reduced radio-frequency interference to enable acoustic coupling) and T (for inductive coupling with hearing aids operating in telecoil mode) rating system nor do any test standards exist for any wireless technologies that transmit above 6 GHz. Therefore, 5G NR mmWave frequency bands cannot be tested. Waiver DA 23-914 was used to demonstrate compliance.

Compulsory FCC statement: This phone has been tested and certified for use with hearing aids for some of the wireless technologies that it uses. However, there may be some newer wireless technologies used in this phone that have not been tested yet for use with hearing aids. It is important to try the different features of this phone thoroughly and in different locations, using your hearing aid or cochlear implant, to determine if you hear any interfering noise. Consult your service provider or the manufacturer of this phone for information on hearing aid compatibility. If you have questions about return or exchange policies, consult your service provider or phone retailer.
