

Part 15.21 statement

" Change or Modifications that are not expressly approved by the manufacturer could void the user's authority to operate the equipment. "

Part 15.105 statement

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Part 15 Class B Compliance

This device and its accessories comply with part15 of FCC rules.

Operation is subject to the following two conditions:

- (1) This device & its accessories may not cause harmful interference.
- (2) This device & its accessories must accept any interference received,
including interference that may cause undesired operation.

Body-worn Operation

This device has been tested for typical body-worn operations
with the distance of 0.79inches (2.0cm) from the user's body.

To comply with FCC RF exposure requirements, a minimum separation distance
of 0.79inches(2.0cm) must be maintained from the user's body.

Additionally, Belt clips, holsters & other body-worn accessories may not contain
metallic components.

Installing the Battery

1. Insert the bottom of the battery into the opening on the back of the phone making sure to align the battery contacts.
2. Push the battery down until it clicks into place.

3. Place the battery cover over the opening on the back of the phone, then slide it upward until it clicks into place.

Removing the Battery

1. Turn the phone off, then slide the battery cover downward to remove it.

2. Remove the battery from the battery compartment by lifting the top of the battery using the fingertip cutout.

Removing & Installing the battery cover

You need to remove the back cover before you can install the battery and micro SD card on your phone. Also, make sure to always turn off the power before installing or replacing a battery.

Getting Started with Your Phone

To remove the back cover

1. Hold the phone securely with both hands (as demonstrated).
2. Push the back cover up with your thumb until it disengages from the phone and then slide it up to remove.

To install the back cover

1. Hold the phone securely with both hands (as demonstrated).
2. Slide the battery cover upward with your thumbs until it clicks into place.

Charging the Battery

Your device comes with a cableless wall adapter and a USB data cable which connect together to charge your phone. To charge your phone:

NOTICE

Please use only an approved charging accessory to charge your LG phone. Improper handling of the charging port, as well as the use of an incompatible charger, may cause damage to your phone and void the warranty.

1. Connect the USB data cable into the cableless wall adapter. When connecting as shown below, the LG logo on the USB cable should face toward you.

Cableless Wall Adapter

2. Gently uncover the accessory charging port, then plug the USB data cable (as shown below) into the phone's charger port and the other end into an electrical outlet.

NOTICE

Please make sure that the 'B' side faces up before inserting a charger or data cable into the charger port of your phone.

3. The charge time varies depending upon the battery level.

Charging with USB

You can use your computer to charge your phone. To be able to charge with the USB cable, you need to have the necessary USB Driver installed on your PC first. Connect one end of the USB cable to the charging accessory port on your phone and the other end to a highpower USB port on your PC (commonly located on the front panel of the computer).

NOTE Low-powered USB ports are not supported, such as the USB port on your keyboard or buspowered USB hub. LG USB Driver is downloadable from the www.lge.com.

Battery Temperature Protection

If the battery gets overheated, the phone will automatically turn off. When you turn the phone back on, a message pops up alerting you that the phone was powered off for your safety.

How to Install Your microSD™ Card

NOTE

Memory card is sold separately.

1. Locate the microSD™ slot on the right side of the phone and gently uncover the slot opening. (microSD™ slot cover stays attached to the phone so you don't lose it).
2. Insert the microSD™ card in the correct direction until it clicks into the slot. If you insert the card in the wrong direction, it may damage your phone or your card.

Getting Started with Your Phone

How to Remove Your microSD™ Card

Gently press and release the exposed edge of the microSD™ card, then remove it from the slot and replace the cover.

NOTES

- Do not attempt to remove the microSD™ card while reading or writing to the card.
- Users wishing to transfer or download music onto a MicroSD™ card inserted into this phone (through either MTP Sync or Over the Air) should format the MicroSD™ card on this handset before using it (through Menu -> Settings & Tools -> Memory -> Card Memory -> Options -> Format). Warning: Formatting the MicroSD™ card will erase all contents on the card. In the event the MicroSD™ card is used on this phone without first formatting it, the phone will display a “License acquisition failed” during OTA downloading or MTP Sync. Song files downloaded or otherwise purchased from third party providers and stored on a MicroSD™ card inserted into this device may be protected or encrypted by such provider and cannot be played on this device.

Battery Charge Level

You can find the battery charge level at the top right of the LCD screen. When the charge level becomes low, the battery sensor sounds a warning tone, blinks the battery icon, and

displays a warning message. As the charge level approaches empty, the phone automatically switches off without saving.

Signal Strength

Call quality depends on the signal strength in your area. You can tell how much signal strength you have by the number of bars next to the signal strength icon:  the more bars, the stronger the signal. If you're having problems with signal quality, move to an open area or, when inside a building, try moving near a window.

Turning the Phone On and Off

Turning the Phone On

1. Insert the battery and connect the phone to an external power source.
2. With the flip open, press  until the LCD screen lights up.

Turning the Phone Off

- With the front LCD unlocked, press the Voice Commands Key , then say the call command you want (for example, "Call 858 555-1212").

Quick Access to Convenient Features

- When the phone rings or vibrates, press and hold the Speakerphone Key  to answer a call with the flip closed.

Speakerphone With a Missed Call

There's no need to open the flip to call back a missed call. When you see a missed call on the front LCD, press the Play/Pause Key  to View, then press and hold the Speakerphone Key  on the right side of the phone to call it.

Volume Optimizer

Volume Optimizer feature consists of "Volume Optimizer" and "Earpiece Optimizer" providing enhanced listening user experience for both speakerphone and earpiece audio.

- **Speakerphone Optimizer**
Operation:

-Adaptive Volume Control:
Speakerphone optimizer will detect that the incoming audio is very low and will increase the audio level of speakerphone automatically.

-Automatic Clipping Management: On the other hand, the audio could become distorted / clipped when audio is too high. Speakerphone optimizer will detect that the incoming audio is too high and will adjust audio signal to reduce distortion / clipping.

- **Earpiece Optimizer**

Audio loudness is relative to surrounding noise level, and volume level setting optimal for office/home environment may suddenly become poor in crowded street or restaurant. When user moves to noisy environment, Earpiece Optimizer feature will automatically increase the earpiece audio level to improve speech intelligibility.

NOTE Default setting of Earpiece Optimizer feature is "Off" on **VN250**. To turn it "On", go to Menu >  **Settings & Tools** >  **Sounds Settings** >  **Voice Clarity** > Select "On".

FCC Hearing-Aid Compatibility (HAC) Regulations for Wireless Devices

On July 10, 2003, the U.S. Federal Communications Commission (FCC) Report and Order in WT Docket 01-309 modified the exception of wireless phones under the Hearing Aid Compatibility Act of 1988 (HAC Act) to require digital wireless phones be compatible with hearing-aids. The intent of the HAC Act is to ensure reasonable access to telecommunications services for persons with hearing disabilities.

While some wireless phones are used near some hearing devices (hearing aids and cochlear implants), users may detect a buzzing, humming, or whining noise. Some hearing devices are more immune than others to this interference noise, and phones also vary in the amount of interference they generate.

The wireless telephone industry has developed a rating system for wireless phones, to assist hearing device users to find phones that may be compatible with their

hearing devices. Not all phones have been rated. Phones that are rated have the rating on their box or a label located on the box.

The ratings are not guarantees. Results will vary depending on the user's hearing device and hearing loss. If your hearing device happens to be vulnerable to interference, you may not be able to use a rated phone successfully. Trying out the phone with your hearing device is the best way to evaluate it for your personal needs.

M-Ratings: Phones rated M3 or M4 meet FCC requirements and are likely to generate less interference to hearing devices than phones that are not labeled. M4 is the better/higher of the two ratings.

T-Ratings: Phones rated T3 or T4 meet FCC requirements and are likely to generate less interference to hearing devices than phones that are not labeled. T4 is the better/higher of the two ratings.

Hearing devices may also be rated. Your hearing device manufacturer or hearing health professional may help you find this rating. Higher ratings mean that the hearing

device is relatively immune to interference noise. The hearing aid and wireless phone rating values are then added together. A sum of 5 is considered acceptable for normal use. A sum of 6 is considered for best use.

In the above example, if a hearing aid meets the M2 level rating and the wireless phone meets the M3 level rating, the sum of the two values equal M5. This should provide the hearing aid user with

“normal usage” while using their hearing aid with the particular wireless phone. “Normal usage” in this context is defined as a signal quality that’s acceptable for normal operation.

The M mark is intended to be synonymous with the U mark. The T mark is intended to be synonymous with the UT mark. The M and T marks are recommended by the Alliance for Telecommunications Industries Solutions (ATIS). The U and UT marks are referenced in Section

20.19 of the FCC Rules. The HAC rating and measurement procedure are described in the American National Standards Institute (ANSI) C63.19 standard.

To enter that the Hearing Aid Compatibility rating for your phone is maintained, secondary transmitters such as Bluetooth and WLAN (this phone does not have WLAN) components must be disabled during a call. See Page 91 for instructions to disable these components.
