

DUT and SAR Set-up Photos

The DUT is a foldable device that has the dimensions of a phablet or tablet depending on the angle orientation.

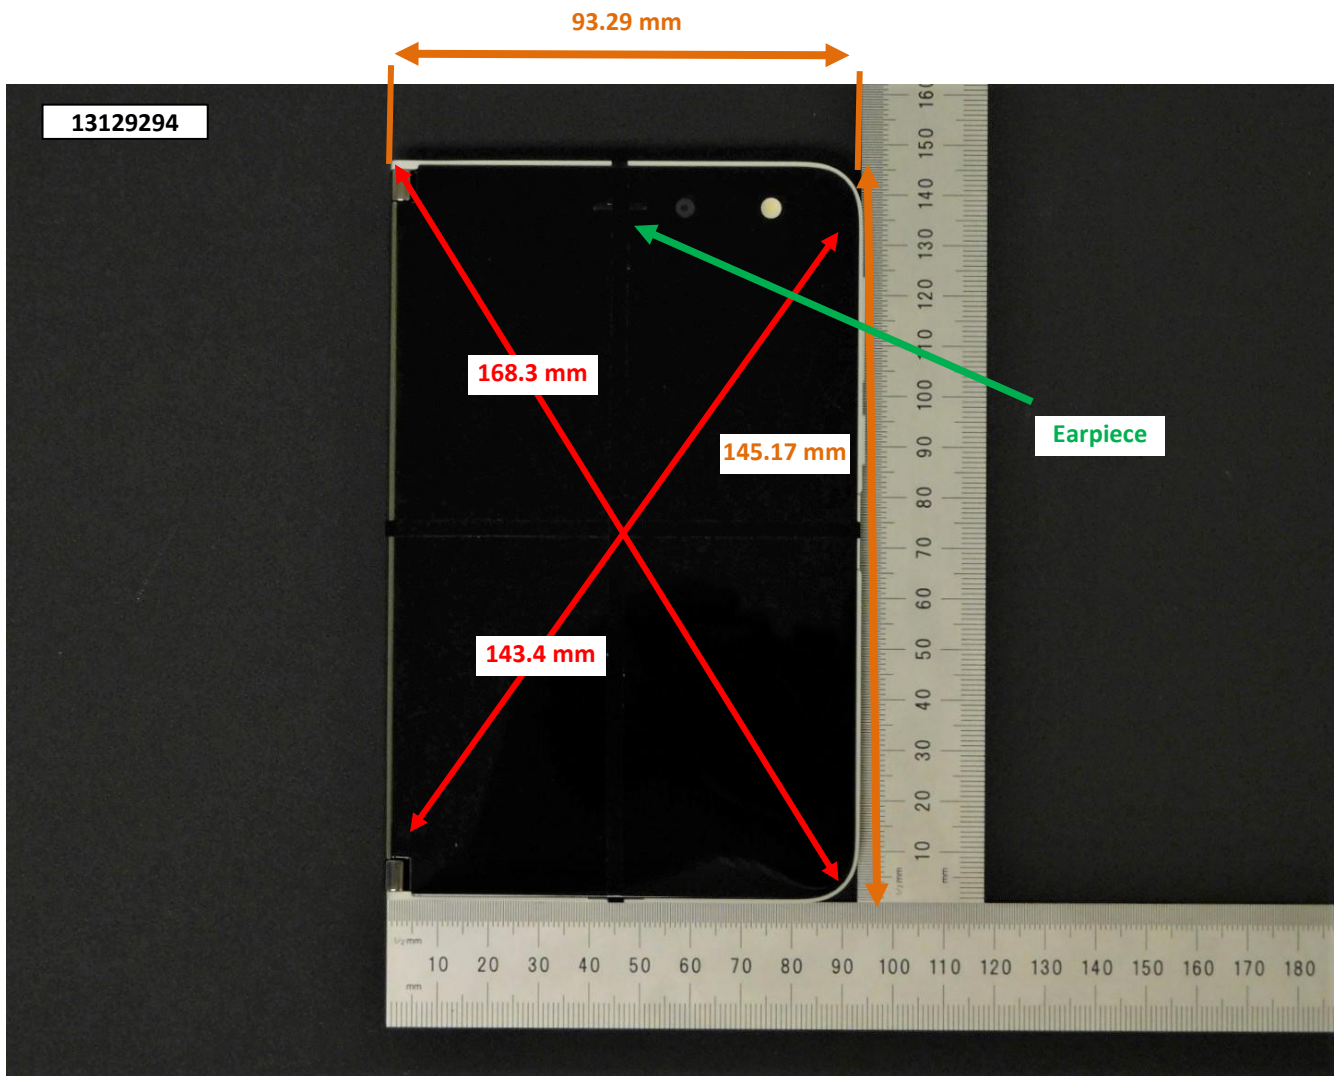

The device supports multiple power states depending on the device configuration and operating conditions. The configuration of the device is determined by calculating the angle between the two displays within a tolerance of 5 degrees via multiple sensors. For SAR, only certain angles were determined to be required for testing. These angles are:

1. 0°: Closed Posture
2. 150° : Read/Compose Posture
3. 180° : Flat Posture
4. 360° : Flip Posture

Notes:

1. The center of the earpiece and center of the phantom do not line up because the device is too long horizontally. The device is moved as close to the center as possible without colliding into the phantom.
