RE: CA6330, Microwave Field Disturbance Sensor EA703117

SUBJECT: Request for Permanent Schematic Confidentiality

To Whom It May Concern:

Southwest Microwave hereby submits the schematic diagrams for its Model 330 Microwave Field Disturbance Sensor. The enclosed documents for the transmitter (04C46642 Rev 0) and receiver (04C46392 Rev 0) are considered by the company to be proprietary because some of the design incorporates a completely new concept in target detection.

In addition to the above, our products are used in highly sensitive security installations such as nuclear power plants, military installations, oil drilling platforms and border detection sites. The company is recognized as a leader in high security and has a well known reputation after 35 years in the security business.

We respectfully request that the information we are supplying will remain confidential not only because of the unique design but also in the interest of national security.

Respectfully Yours,

Edward J. Foley
