

Functional Description

The 5811 is a battery powered portable transmitter and is part of a wireless alarm system. It is used in conjunction with a receiver (5881) as a door / window sensor to indicate a door / window event to the alarm system. These messages are transmitted at 345Mhz +/-82Khz using OOK AM modulation. The 5811 sends a regular supervision or check-in message, no more often than once per hour. It also sends messages initiated by the condition of the loop (open or closed).
