

## INTERNAL PHOTOS

Please note that there are no physical differences between a LYNXTOUCH1 and LYNXTOUCH2. The LYNXTOUCH1 runs software that can 'talk' to a 2G Cellular Module, and the LYNXTOUCH2 runs software that can 'talk' to a 3G Cellular Module. Of course; the LYNXTOUCH2 contains a 3G Cellular Module rather than a 2G Cellular Module. Also, the Cellular Modules are also identical in appearance and plug into the mother board ( The TOUCH ) in the same way.
