**FCC PART 15B TEST REPORT**

**REPORT NUMBER: FG07-172EAL**

Report No. : FG07-172EAL (1/10)

## EMI Test report

CATEGORY : EN55022(2006) / CISPR 22(2005) ; Class B  
AS/NZS CISPR22 (2002)  
FCC Part-15 (2007)  
VCCI (2007)  
EN301 489-01 V1.4.1

**MANUFACTURER :** FUJITSU LIMITED  
4-1-1, Kamikodanaka, Nakahara-ku, Kawasaki 211-8588 JAPAN

**PRODUCT TYPE :** Personal computer P1620  
Port Replicator FPCPR56  
AC Adapter SED80N2-16.0 SEB55N2-16.0  
WL-LAN Module WM3945ABG 4965AG  
Bluetooth module EYTF3CS FT

**TEST SITE :** FUJITSU GENERAL EMC LABORATORY  
1116, Suenaga, Takatsu-ku, Kawasaki 213-8502 JAPAN

**DATE TESTED :** December 13, 2007 24°C 45%

**TESTED BY :** Hiroyuki Aikawa

Above EUT conforms mentioned all regulations.

**APPROVED BY :** for K. Shimano **DATE :** December 21, 2007  
Hiroyuki Shimano, President

### FUJITSU GENERAL EMC LABORATORY LIMITED

1116, Suenaga, Takatsu-ku, Kawasaki 213-8502 JAPAN

TEL: (044)861-7897 FAX: (044)861-9890

**CLIENT :** Global Business Division, FUJITSU LIMITED  
4-1-1, Kamikodanaka, Nakahara-ku, Kawasaki 211-8588 JAPAN

※ The description of the EUT and the system configuration in this report are provided by the client.

Product Service

Accredited by NVLAP.  
Authorized by TÜV SÜD PS.  
Appointed by TÜV Rheinland Japan  
Registered on VCCI.

## 1. Description of EUT

The EUT: P1620 personal computer using selected CPU; Core2 Duo U7700 1.3 GHz microprocessor has a 8.9 inch WXGA Display, 2048 MB Memory and a system disk (100 GB). The EUT has the interface for RGB④, Mic-in/Phone-out①, LAN⑦, TEL④, USB×2②③, PC card slot, SD card slot, Bluetooth and wireless LAN.

**Internal clock frequency : 4.000 MHz, 6.000 MHz, 14.318 MHz, 25.000 MHz, 33.300 MHz, 48.000 MHz, 96.000 MHz, 100.000 MHz, 133.000 MHz**

**Input power : AC 100 - 230V, 50 / 60 Hz, Single-phase 2 wires**

The EUT is intended to use generally in the residential / domestic area or commercial and light industrial area; category class B.

### 1.1 Test system configuration

The measurement was performed using P1620 with all related equipment as a maximum personal computer system shown in figure-1.

The preliminary measurement performed using the FPCPR56+P1620 and P1620, and the final measurement was performed using P1620 that the most minimum margin for radiated emission.

The EUT was selected from the pre-production line.

## 1.2 Operating condition

The following EUT and dependent devices were tested using “EMC.exe”, “Blue test” and “CRTU” program under continuous operating condition to obtain maximum emission.

- |                  |               |   |
|------------------|---------------|---|
| ① PC-1           | LCD-1:        | Display “H” character on screen (Maximum contrast/ Luminescence)<br>(Display resolution 1280×768 / Refresh rate 60Hz) |
|                  | HDD:          | Read/write the test data  |
|                  | LAN:          | Continuous transmission and reception of the ping command (1000 M Max)  |
|                  | TEL:          | Continuous transmission of the test data (56 kbps)  |
|                  | Bluetooth:    | Continuous transmission of the RF signal.   |
|                  | Wireless LAN: | Continuous transmission of the RF signal.   |
| ② PC card:       |               | Read/write the test data  |
| ③ SD card:       |               | Read/write the test data  |
| ④ USB2.0 Memory: |               | Read/write the test data (480 M max)  |
| ⑤ LCD-2:         |               | Display “H” character on screen (Maximum contrast / Luminescence)   |
| ⑥ Headset:       |               | Connecting only   |
| ⑦ USB mouse:     |               | Connecting only   |
| ⑧ PC-2:          |               | Receiving ping command and test data.   |

## 2. EMI test results summary

Applied standard: EN55022 (2006)

Limit value: Class B

The test samples met the class B limit of EN55022(2006)/ CISPR22(2005) and applicable below regulations as shown the following highest 6 points of each emission profiles.

Australia, New Zealand: AS/NZS CISPR22(2002)

USA: FCC Part-15(2007), Canada: CAN/CSA-CEI/IEC CISPR22-02

Japan: VCCI(2007), Taiwan: CSN 13438(2006)

The telecommunication conducted emission is not covered VCCI registered.

The test result is effective in only for the EUT.

### 2.1 Radiated emission (30 MHz to 1,000 MHz) : Measured at 10 m distance

< AC 230 V / 50 Hz single phase, Wireless LAN module; WM3945ABG >

21.479	5.8		30.0	20.0	14.2

- Limit value ; CISPR 22(2005)

**3. EUT modification under the test**

The following countermeasures were implemented for the radiated emission.

- ① The electro conductive cloth was add to the internal DC cable.
- ② The ferrite core was add to the internal DC cable.
- ③ The electro-conductive cloth was added to the position between the DC cable and the Modem module.

#### 4. Measurement procedure and test equipment

The measurement was performed without deviation from CISPR22 (2005)

##### 4.1 Radiated emission

###### 4.1.1 Radiated emission (30MHz~1,000MHz)

The EUT was set on the 80 cm height desk placed on the turntable in the 10 m RF semi-anechoic chamber.

The PC-2, PC3 and HUB were placed at outside of the chamber to make usual install condition at the different place. The maximum noise level in the frequency range from 30 MHz to 1,000 MHz were measured by 10 m method with scanning the antenna height from 1 m to 4 m above the ground plane and rotating the EUT through 360 degrees for both horizontal and vertical polarization.

Preliminary measurement using spectrum analyzer peak detection was performed to arrange the minimum margin spectrum. The settings of the interface cables and the mouse were adjusted to obtain maximum level at the minimum margin spectrum. The final measurement was performed using the RFI receiver (CISPR Quasi-peak, 120 kHz band width) and calibrated broadband antennas or dipole antennas about the main spectrums that was obtained by the preliminary measurement.

Test equipment	Manufacturer	Type	S/N	Cal. Date	Due. Date
Bi Log antenna	Schwarzbeck	VULB9160	3118	2007.01.04	2008.01.04
Dipole antenna	Schwarzbeck	VHA9103	VHA91031573	2006.12.28	2008.12.28

EMI test program	FGE	Version 1.3			

###### 4.1.2 Radiated emission (1 GHz~6.5 GHz)

The EUT was set on the 80 cm height non-reflective desk on the turntable. The radiated emission measurement from 1 GHz to 6.5 GHz: Operating rate 1.3 GHz was performed using the spectrum analyzer (Peak detection, 1MHz band width) and the horn antenna that was positioned at 3 m from the EUT for class B. The measurement was performed with rotating the EUT through 360 degrees and fixing the antenna height to the 1 m for both horizontal and vertical polarization.

Test equipment	Manufacturer	Type	S/N	Cal. Date	Due. Date
Horn antenna	Schwarzbeck	BBHA9120D	414	2007.02.23	2009.02.23

2nd semi-anechoic chamber	Riken eletech	----	----	2007.01.16	2009.01.16

##### 4.2 AC power line conducted emission

The conducted emission measurement was performed using the 50Ω/50μH artificial mains network: AMN in the shielded room. The EUT was set on the 80 cm height wooden desk and operated by AC 100 V/ 50 Hz, AC 120 V/ 60 Hz and AC 230 V/ 50 Hz. Preliminary measurement using spectrum analyzer peak detection was performed in the frequency range from 150 kHz to 30 MHz to arrange the minimum margin spectrum. The setting of the cables was adjusted to obtain maximum level at the minimum margin spectrum. The final measurement was performed using the RFI receiver (CISPR Quasi-peak, 9 kHz band width) and recorded the maximum value in the monitored interval about the main spectrum that was obtained by the preliminary measurement.

Test equipment	Manufacturer	Type	S/N	Cal. Date	Due. Date
AMN for EUT	Kyoritsu	KNW-407	8-823-18	2007.01.15	2008.01.15

EMI test program	FGE	Version 1.3			

### 4.3 Telecommunication line conducted emission

The conducted emission measurement was performed using the impedance stabilization network: ISN LCL; 55 dB for telecom port, current probe for shielded LAN port in the shielded room. The EUT was set on the 40 cm height wooden desk and operated by AC 230 V/ 50 Hz. Preliminary measurement using spectrum analyzer peak detection was performed in the frequency range from 150 kHz to 30 MHz to arrange the minimum margin spectrum. The setting of the cables was adjusted to obtain maximum level at the minimum margin spectrum. The final measurement was performed using the RFI receiver (CISPR Quasi-peak, 9 kHz band width) and recorded the maximum value in the monitored interval about the main spectrum that was obtained by the preliminary measurement.

Test equipment	Manufacturer	Type	S/N	Cal. Date	Due. Date

RF cable	----	CF009	----	2007.05.07	2008.05.07

### 5. Test site and traceability

The FUJITSU GENERAL EMC LABORATORY performs the test for VCCI / EN / CISPR regulation and Fujitsu / Fujitsu General internal regulations. The test procedures and test facilities are comply with international standard. The laboratory is filed on VCCI (Japan), accredited from NVLAP (U.S.A.), authorized from TÜV SÜD PS (Germany) and appointed from TÜV Rheinland (Germany).

VCCI : 1st semi-anechoic chamber(R-753/C-776), 1st shielded room(C-777)  
Large shielded room(C-778)  
2nd semi-anechoic chamber(R-1460/C-1547), 2nd shielded room(C-1548)  
3rd shielded room(C-1549)

NVLAP : 1998.12.01 Accredited: Lab code 200373-0

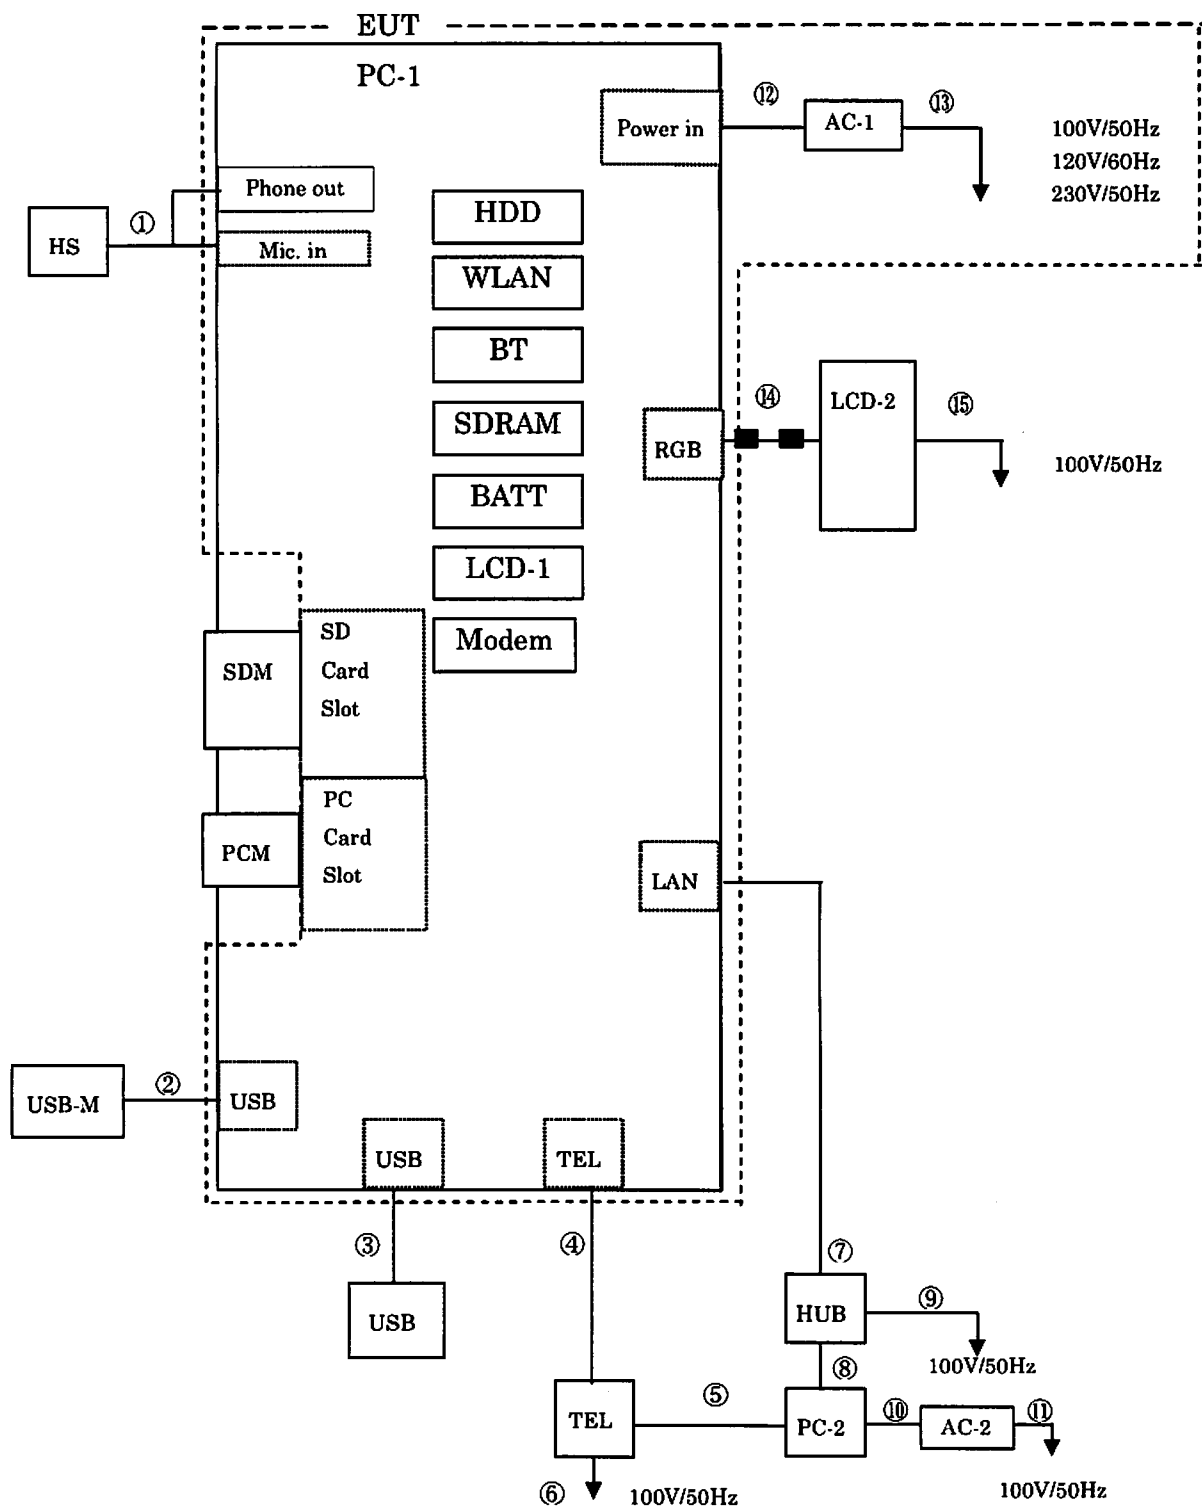

TÜV SÜD PS : 1999.01.29 Authorized

TÜV Rheinland Japan : 2005.08.25 Appointed

The measuring equipments were used in the laboratory and test data are traceable to the national or international standard. Each equipment is maintain by periodical calibration and by daily check as a total measurement system to keep those accuracy.

LCD-2	LCD display	P19-1	YEGA217491	FSC
HS	Head set	GN 501FSC	----	FSC
PC-2	Personal computer	FMV	----	Fujitsu
HUB	Switching Hub	ETG-SH-8	VD7000010513N	----
AC-2	AC adapter	FMV-AC312	03Y15899C	Fujitsu
TEL	Telephone line emulator	TEL101- II	309688	ASCII
USB	USB Mouse	M-BT69e	HCA52701556	FSC
USB-M	USB memory	128MB	----	I·O DATA
PCM	PC memory card	20 MB	----	SunDisk
SDM	SD memory card	128 MB	----	Panasonic

**Cables** SLD: Shielded NSLD: Non-shielded CAX: Coaxial

Connector MC: Metal NMC: Non-metal PMC: Point contact metal

No.	I/O Port	Name	Type	Length	Cable type
①	Phone-out/Mic-in	Headset cable	----	2.2m	NSLD,NMC
②	USB	USB cable	----	1.8m	SLD,MC
③	USB	USB mouse cable	----	2.0m	SLD,MC
④	TEL	Modular cable	----	20.0m	NLD, NMC
⑤	----	Modular cable	----	1.0m	NLD, NMC
⑥	----	AC power cable	----	1.8m	2P-NSLD
⑦	LAN	LAN cable	----	20.0m	SLD, MC
⑧	----	LAN cable	----	1.0m	NSLD, NMC
⑨	----	AC power cable	----	2.0m	3P-NSLD
⑩	----	AC adaptor cable	----	1.8m	NSLD,NMC
⑪	----	AC power cable	----	1.8m	2P-NSLD
⑫	----	AC adaptor cable	----	1.6m	NSLD,NMC
⑬	----	AC power cable	----	2.0m	2P-NSLD
⑭	RGB	RGB cable	----	1.8m	SLD, MC fixed core
⑮	----	AC power cable	----	2.0m	3P-NSLD
