

IH85 Technical description:

TX:

U1(SH67P33C) send pulse code to Q2 when the key pressed by the user, Q2 and 433MHz saw filter construct as a oscillator, oscillation when received a pulse make from U1, then feed signal to Q1 a amplifier feed to 433.92MHz low pass filter network L3,C12,C8, L4,C9 then to antenna.
