FCC ID: G6D3377HHS

Circuit Description

The $\underline{49.86}$ MHz crystal oscillator drives the base of $\underline{Q2}$ the final/buffer amplifier. The modulation provided by $\underline{Q1}$. The output of $\underline{Q2}$ has the matching network consisting of $\underline{C5}$, $\underline{C6}$, $\underline{C7}$, $\underline{C8}$ and $\underline{L3}$, $\underline{L4}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a <u>24.5</u>cm long Metal antenna.

There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 3 Volt ("AA" size battery x 2) primary battery

Operation Descriptions

The transmitter is a <u>remote control toy</u> operating at <u>49.86</u>MHz band. The transmitter is powered by a <u>3V</u> battery (<u>"AA" size battery x 2</u>) and the transmitting frequency is crystal controlled. There are <u>button</u> to control the forward reverse motor. The operation is achieved by different combinations of form pulse modulating signal on the <u>49.86</u>MHz carrier frequency.

Remarks:

The transmitter is a <u>one</u> button transmitter. The EUT continues to transmit while button is being pressed. It is button transmitter, Modulation by <u>IC</u>; and type is <u>Pulse</u> modulation.
