REF: #081315

URGENT

Reference: JOB 1055UC3

The following is our reply to your comments from this morning.

1. Part 2.1093 & 2.1091

As discussed during our telephone conversation we are advising Atlinks that they are to insert the following in the same area as the FCC RF Radiation Exposure Statement.

"FCC RF Exposure Requirements (For Handset)

Specific Absorption Rate compliance for body-worn operations is restricted to belt-clips, holsters or similar accessories that have no metallic component in the assembly and must provide at least 0.7cm separation between the device, including its antenna and the user's body."

Please note that we will also give them the option of using the alternate statement, in which case the following will appear in the manual

"FCC RF Exposure Requirements

For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines when used with the belt clip supplied with this product. Use of other accessories may not ensure compliance with FCC RF exposure guidelines."

2. 731 Form - Output Power

We apologize for the incomplete form. This is to confirm that the powers listed in the **Part 15 test report for the Base and the Handset units are respectively 55 and 87 mW Peak output power.**

3. Noted and Celltech have apologized for their error. Please note that the corrected letter was faxed to Timco last night.

We hope that with the above response you can issue the Grant for this project today. Please do not hold up this Grant due to not receiving the revised manual page insert and revised manual. We have asked ATLINKS to provide it immediately and should receive it in the next day or two and will forward it to you upon receipt.

Best Regards

Linda Skrepnek,
