

APPLICANT: GREAT POWER ELECTRONIC PRODUCTS CO., LTD.  
FCC ID: GEGGP906T

### Circuit Description

#### 27 MHz Transmitter

Q1 and associated components make up the crystal oscillator. IC1 provides the modulation which is driven into the base of Q2 the RF final transistor. The inputs of IC1 is manually switched by the operator. The antenna is transformer (L2) coupled to the Q2 stage.

#### Antenna, Ground, and Power Source.

The antenna is of the telescoping type. There is no external ground connection provided and the only ground is that of the printed circuit board traces. A standard 9 Volt battery is the source of power for this hand held unit.
