RE: Visonic Ltd.

FCC ID: GSAMCT241MDRL

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Your previous response to comment 1 states that there is no "special" transmission for low battery message. Note the following from the users manual does mention including it during normal transmissions, but also mentions a "low battery message will be transmitter" ,.... and included in every normal transmission. Please provide information on how the transmitted low battery message that is not included in normal transmission meets 15.231 requirements.

2.3 Low Battery Voltage Indication

The battery is automatically tested under load once in 12 hours. If a low battery state is registered in 3 consecutive tests, a "low battery" message will be transmitted, and a "low battery" digital marker will be included in every transmission, "alarm" or "tilt". In addition, when the battery voltage is low, the LED flashes while the pushbutton is pressed.
