

## **Response to TCB Findings**

1. Please clarify if all the RF circuitry is in the enclosure shown in external photos. It appears there's a controller associated with the transmitter.

There is an associated controller, but it is not included in the application. The controller handles the data to and from the EUT. All RF circuitry is included in the product shown in the external photo exhibit.

2. The internal photo supplied shows only a board. Please clarify if there are other parts / components in the enclosure that needs to be identified. If so, please supply a general internal view of the device.

There is only one PCB in this product. The only other component with significance is the loop antenna that transmits 1MHz. Please see the photographs of the antenna.

3. Please provide a photo of the antenna associated with this transmitter and specify its length.

Please see the photos supplied. Outside coil is 165cm and inside is 60cm.
