RE: FCC ID: Hyq13bbt  
Attention: Ms. Hiroka Umeyama

I have a few comments on this Application.

- 1 While a Super Heterodyne receiver does not need certification and can be DOC'd, if certification is sought, it must be tested in accordance with ANSI C63.4 par 12.1.1.1. ANSI specifies that a CW signal from a signal generator SHALL be used to cohere with the receiver frequency. Please note that the testing done in the report is not in accordance with ANSI C63.4 in this respect. Please provide data showing testing was done in accordance with ANSI C63.4.
- 2 If this is a part 15 subpart B digital device, the statement in 15.105 must be in the manual.
- 3 While it can be assumed that the antenna was present during radiated emissions, it is not stated in the report that the antenna was connected. Please verify that the antenna was connected to the antenna terminals or that a resistive network was connected. If a resistive network was connected, then antenna terminal measurements must be made. Please clarify.

A handwritten signature in black ink that reads "Dennis Ward".
