Supplement to SAR Test Report for Motorola portable cellular phone (FCC ID IHDT6ES1)

Prepared by:

Albert Patapack

Motorola Personal Communications Sector Product Safety Laboratory

Libertyville, Illinois

Summary of FCC request for additional information

There was a request for additional information regarding Motorola's SAR Test Report for Motorola portable cellular phone (FCC ID IHDT6ES1). The requested information is addressed below in the same numbering sequence received.

1. Please submit the Body SAR test photos.

Response: The photo was inadvertently omitted and is attached here.

3. Body SAR spacing is listed at both 15 mm and 25 mm in the SAR summary pages. Please clarify.

Response: Currently, Motorola performs body worn testing for GSM voice transmissions at a distance of 15mm from the flat phantom and for class 10 GPRS data transmissions at a distance of 25mm from the flat phantom. A data transmission body worn separation of 25mm, or 1 inch, is within the supplement C standard guidelines and is specified in the user's manual.
