

To whom it may concern:

The FCC identifier is located inside the battery compartment on this device model Montana 6x0, 01102524 because of limited areas. This device is small, handheld with many curved surfaces. The top side is taken by most of a removable battery compartment cover and the bottom side is taken up by the large portion of display. The FCC identifier will be readily viewable as it will be visible each time the batteries are replaced in the device. Since the device will be sold without batteries installed the user will have to install batteries prior to using, thus they will see the FCC identifier prior to using the device for the first time. In addition to having the FCC identifier on the inside of the battery compartment, it will also be on the outside of the removable battery door, making it readily viewable at the time of purchase.

Sincerely,

A handwritten signature in cursive script, appearing to read "P. Phrommany".
