

A3545 and C3545 have identical transmitter characteristics but differ in the following ways

Model differences

The CL0-1 (C3545) and CL5 (A3545) use the same PCB, Power and RF circuitry. The model differences are different in the following ways:

- 1) Display: CL0-1 does not have an integral touch screen display
- 2) HDMI: CL5 does not have an HDMI output

During testing both models were tested for EMI/EMC requirements separately.

Both models have identical PCB layouts and signal routing with respect to the transmitters installed.

During RF testing both models were initially investigated and determined to have identical transmitter characteristics. Transmitter testing was then performed only on the CL5 to demonstrate compliance.
