

ATW-T902

Description of circuits to stabilize frequency

Transmitting frequency is determined and stabilized by a PLL circuit using a 12MHz crystal-Controlled reference oscillator

Description of circuit to suppress spurious emission

The Low pass filter placed in between Q200 RF-Amp and Antenna that consists by L202, L203, L204, C212, C214, C215, C216 suppresses the spurious emission.
