Item 1. The users manual refers to an RF Exposure Statement stating 20cm separation. This statement is not sufficient for an RF Exposure warning since the user will typically be within 20cm; this is not a mobile device. Please revise users manual statement.

> What will be the industry put for handheld device? Please give me
> samples or direction on this.

Item 2. Please clarify antenna used with CISCO card. Is the internal antenna used for this device, does it use the same antenna as 902-928MHz Transmitter.

> No, the CISCO has 2 small patch antennas and that is completely
> separated from the reader antenna.

Item 3. Please clarify operational mode during emissions testing. Has the product been evaluated for simultaneous transmission using both transmitters?

> Yes, we tested the handheld reader with both reader and WIFI on at the
> same time.
