Package Contents

- D-Link DWR-113 3G Wi-Fi Router
- Power Adapter
- Manual and Warranty on CD
- External Wi-Fi antenna

Note: Using a power supply with a different voltage rating than the one included with the DWR-113 will cause damage and void the warranty for this product.

System Requirements

- A compatible 3G USB modem
- Computers with Windows®, Macintosh®, or Linux-based operating systems with an installed Ethernet adapter
- Internet Explorer Version 6.0 or Netscape Navigator™ Version 6.0 and above (for configuration)

Introduction

The D-Link 3G Wi-Fi Router allows users to access worldwide mobile broadband networks. Once connected, users can transfer data, stream media, and send SMS messages. Simply connect your USB modem and share your 3G Internet connection through a secure 802.11n wireless network or using the 10/100 Ethernet port.

While accessing your 3G Internet connection, you will still have the ability to respond to SMS messages.

The 3G Wi-Fi Router can be installed quickly and easily almost anywhere. This router is great for situations where an impromptu wireless network must be set up, or wherever conventional network access is unavailable. The DWR-113 can even be installed in buses, trains, or boats, allowing passengers to check e-mail or chat online while commuting.

Hardware Overview

Back Panel

Port	Function
USB Port	Connects to a USB modem.
LAN Port	Connects to wired computers or devices.
WAN Port	Connects to the Internet.
Power Port	Connects to the power adapter.

Hardware Overview

Front Panel and LEDs

LED	Description			
	Color	Solid	Blinking	Blinking (Fast)
3G	Green	3G connection established	Data transmitting	-
WAN	Green	WAN connection established	Data transmitting	-
Wi-Fi	Green	Wi-Fi active and available	Data transmitting	Device in WPS mode
LAN 1 - LAN 4	Green	Ethernet connection established	Data transmitting	-

Installation

This section will guide you through the installation process. Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, or in an attic or garage.

Connect to Your Network

Note: Ensure that your DWR-113 3G Wi-Fi Router is disconnected and powered **off** before performing the installation steps below.

1. Connect a USB modem to the **USB** port on the back of the router.
2. Insert a LAN network cable into the **LAN** port on the back of the router. Plug the other end of the LAN cable into the LAN port of your computer or laptop. The Ethernet LED will turn green if the Ethernet connection is successfully established.

Note: The DWR-113 3G Wi-Fi Router LAN Port is “Auto-MDI/MDIX.” Therefore, patch or crossover Ethernet cables can be used.

3. Configure the device using the setup utility.

Wireless Installation Considerations

The DWR-113 can be accessed using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the quantity, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or office. The key to maximizing the wireless range is to follow these basic guidelines:

1. Minimize the number of walls and ceilings between the D-Link router and other network devices. Each wall or ceiling can reduce your adapter's range from 3 to 90 feet (1 to 30 meters).
2. Be aware of the direct line between network devices. A wall that is 1.5 feet thick (0.5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle it looks over 42 feet (14 meters) thick. Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.
3. Try to position access points, wireless routers, and computers so that the signal passes through open doorways and drywall. Materials such as glass, metal, brick, insulation, concrete and water can affect wireless performance. Large objects such as fish tanks, mirrors, file cabinets, metal doors and aluminum studs may also have a negative effect on range.
4. If you are using 2.4 GHz cordless phones, make sure that the 2.4 GHz phone base is as far away from your wireless device as possible. The base transmits a signal even if the phone is not in use. In some cases, cordless phones, X-10 wireless devices, and electronic equipment such as ceiling fans, fluorescent lights, and home security systems may dramatically degrade wireless connectivity.

Configuration

This section will show you how to configure your new D-Link mobile router using the web-based configuration utility.

Web-based Configuration Utility

To access the configuration utility, open a web-browser such as Internet Explorer and enter the IP address of the router (192.168.0.1).

Type **Admin** and then enter the password. By default, the password is blank.

If you get a **Page Cannot be Displayed** error, please refer to the **Troubleshooting** section for assistance.

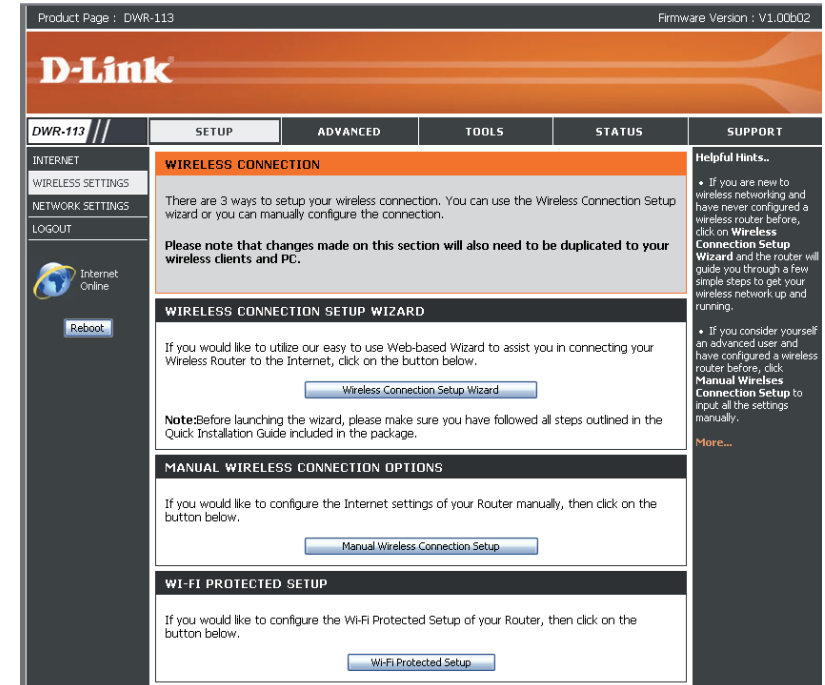

A screenshot of the D-Link router's login page. The page has an orange header with the word 'LOGIN'. Below it, the text 'Log in to the router:' is displayed. There are two input fields: 'User Name' with the text 'admin' entered, and 'Password' which is empty. A 'Log In' button is located to the right of the password field.

Setup Wizard

The setup wizard guides you through the initial setup of your router. There are two ways to setup your Internet connection. You can use the Web-based **Internet Connection Setup Wizard** or you can manually configure using the **Manual Internet Connection Setup** wizard.

Click **Internet Connection Setup Wizard** to begin.

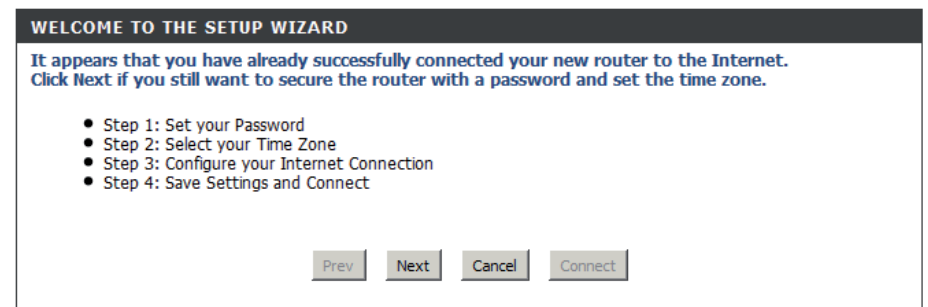

If you want to enter your settings without running the wizard, click **Manual Internet Connection Setup** and skip to page 13.

Internet Connection Setup Wizard

This wizard will guide you through a step-by-step process to configure your D-Link router to connect to the Internet.

Click **Next** to continue.

Create a new password and then click **Next** to continue.

Click **Prev** to go back to the previous page or click **Cancel** to close the wizard.

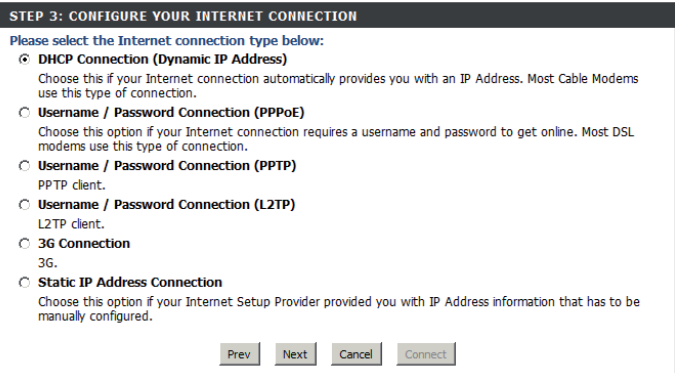

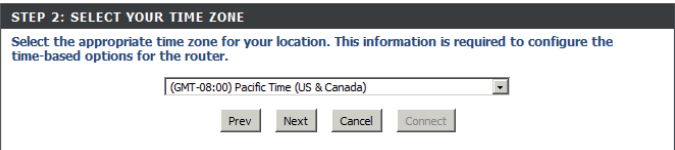

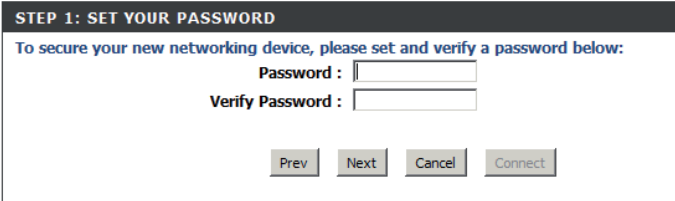

Select your time zone from the drop-down box and then click **Next** to continue.

Click **Prev** to go back to the previous page or click **Cancel** to close the wizard.

Select the Internet connection type. The connection types are explained on the following page. If you are unsure of the correct connection type, you may have to contact your Internet Service Provider (ISP).

Click **Prev** to go back to the previous page or click **Cancel** to close the wizard.

Note: The DWR-113 supports several kinds of WAN interfaces, allowing you to assign either a WAN or a WWAN(3G) connection as the Backup WAN. If the Primary WAN is down or unavailable, configure the Backup WAN to **Enable**, and all the traffic will be routed through Backup WAN. This feature is called **WAN Failover**. You can use WAN Failover if you need redundancy to your Internet connection or any other network.

The subsequent configuration pages will differ depending on the selection you make on this page.

- DHCP Connection (Dynamic IP Address):** Choose this if your Internet connection automatically provides you with an IP Address. Most cable modems use this type of connection. See page 16 for information about how to configure this type of connection.
- Username / Password Connection (PPPoE):** Choose this option if your Internet connection requires a username and password to connect. Most DSL modems use this style of connection. See page 17 for information about how to configure this type of connection.
- Username / Password Connection (PPTP):** Choose this option if your Internet connection requires Point-to-Point Tunneling Protocol (PPTP). See page 18 for information about how to configure this type of connection.
- Username / Password Connection (L2TP):** Choose this option if your Internet connection requires Layer 2 Tunneling Protocol (L2TP). See page 19 for information about how to configure this type of connection.
- Static IP Address Connection:** Choose this option if your Internet Setup Provider provided you with IP Address information that has to be manually configured. See page 21 for information about how to configure this type of connection.

You have completed the **Setup Wizard**.

Click **Connect** to save your settings.

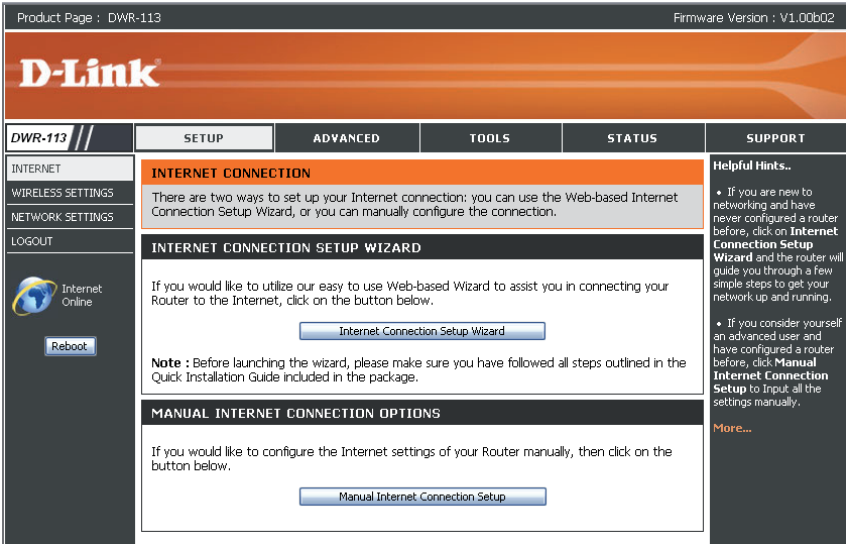

A popup will appear, to confirm your settings.

Click **OK** to save your settings.

Manual Internet Connection Setup

Click **Manual Internet Connection Setup** to begin.

If you want to configure your router to connect to the Internet using the wizard, click **Internet Connection Setup Wizard** and refer to page 9.

Internet Connection

Internet Connection Type

Several different Internet Connection types can be selected depending upon the specifications of your Internet Service Provider (ISP).

My Internet Connection is: Select the Internet Connection type specified by your Internet Service Provider (ISP). The corresponding settings will be displayed below. Please see the following pages for details on how to configure these different connection types.

Failover Internet Connection is: This connection can serve as a backup for your default connection.

Host Name: Enter the name of the Internet host to be used as the backup connection.

Primary DNS Server: Enter the primary DNS server.

Secondary DNS Server: Enter the secondary DNS server.

MTU: Set the MTU (the default value is 1500).

MAC Address: Manually enter the MAC address or click **Clone** to copy the PC's MAC address.

Auto-reconnect: Tick this check box to enable auto-reconnect.

INTERNET CONNECTION

Use this section to configure your Internet Connection type. There are several connection types to choose from: Static IP, DHCP, PPPoE, PPTP, L2TP, BigPond, and 3G. If you are unsure of your connection method, please contact your Internet Service Provider.

Note: If using the PPPoE option, you will need to remove or disable any PPPoE client software on your computers.

Save Settings Don't Save Settings Failover Setting...

INTERNET CONNECTION TYPE

Choose the mode to be used by the router to connect to the Internet.

My Internet Connection is Dynamic IP (DHCP)

Failover Internet Connection is N/A

DYNAMIC IP (DHCP) INTERNET CONNECTION TYPE

Use this Internet connection type if your Internet Service Provider (ISP) didn't provide you with IP Address information and/or a username and password.

Host Name :

Primary DNS Server :

Secondary DNS Server :

MTU : (bytes) MTU default = 1500

MAC Address : Clone

Auto-reconnect : ☐ Enable

Helpful Hints..

- Internet Connection:** When configuring the router to access the Internet, be sure to choose the correct **Internet Connection Type** from the drop down menu. If you are unsure of which option to choose, please contact your **Internet Service Provider (ISP)**.
- Support:** If you are having trouble accessing the Internet through the router, double check any settings you have entered on this page and verify them with your ISP if needed.

[More...](#)

Dynamic IP (DHCP)

This section will help you to obtain IP Address information automatically from your ISP. Use this option if your ISP didn't provide you with IP Address information and/or a username and password.

Host Name: (Optional) Required by some ISPs.

Primary DNS Server: (Optional) Fill in with IP address of primary DNS server.

Secondary DNS Server: (Optional) Fill in with IP address of secondary DNS server.

MTU (Maximum Transmission Unit): You may need to change the Maximum Transmission Unit (MTU) for optimal performance. The default value is 1500.

MAC Address: The default MAC Address is set to the Internet port's physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP. You can use the **Clone Your PC's MAC Address** button to replace the Internet port's MAC address with the MAC address of your PC.

Auto-reconnect: This feature enables this product to renew WAN IP address automatically when the lease time is expiring.

The screenshot shows a web interface titled "DYNAMIC IP (DHCP) INTERNET CONNECTION TYPE". Below the title is a blue instruction box: "Use this Internet connection type if your Internet Service Provider (ISP) didn't provide you with IP Address information and/or a username and password." The form contains several fields: "Host Name" with the value "ROUTER", "Primary DNS Server" with "0.0.0.0", and "Secondary DNS Server" with "0.0.0.0" and "(optional)" text. The "MTU" field is set to "1500" with "(bytes) MTU default = 1500" text. The "MAC Address" field shows "00-21-9B-57-2A-9C" and has "Save" and "Restore MAC" buttons. The "Auto-reconnect" option is a checkbox labeled "Enable" which is currently unchecked. At the bottom are "Save Settings" and "Don't Save Settings" buttons.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

PPPoE

Choose this Internet connection if your ISP provides you PPPoE account.

Username: The username/account name that your ISP provides to you for PPPoE dial-up.

Password: Password that your ISP provides to you for PPPoE dial-up.

Verify Password: Fill in with the same password in Password field.

Service Name: (Optional) Fill in if provided by your ISP.

IP Address: (Optional) Fill in if provided by your ISP. If not, keep the default value.

Primary DNS Server: (Optional) Fill in if provided by your ISP. If not, keep the default value.

Secondary DNS Server: (Optional) Fill in if provided by your ISP. If not, keep the default value.

MAC Address: MAC address of WAN interface. You can also copy MAC address of your PC to its WAN interface by pressing **Clone Your PC's MAC** button. The **Restore MAC** button will reset the router to its default MAC address.

Maximum Idle Time: The amount of time of inactivity before disconnecting established PPPoE session. Set it to zero or enable Auto-reconnect will disable this feature.

Maximum Transmission Unit (MTU): The default setting of PPPoE is 1492.

Auto-reconnect: The device will dial-up PPPoE connection automatically.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

The screenshot shows the PPPoE configuration page. At the top, it says "PPPoE" and "Enter the information provided by your Internet Service Provider (ISP)". Below this are several input fields: Username, Password, Verify Password, Service Name (optional), IP Address (0.0.0.0), Primary DNS Server (0.0.0.0 optional), Secondary DNS Server (0.0.0.0 optional), MAC Address (00-00-00-00-01-00) with "Save" and "Restore MAC" buttons, Maximum Idle Time (300 seconds), MTU (1492 bytes) with a note "MTU default = 1492", and Auto-reconnect (checkbox) with "Enable" text. At the bottom are "Save Settings" and "Don't Save Settings" buttons.

PPTP

Choose this Internet connection if your ISP provides you PPTP account.

Address Mode: Choose Static IP only if your ISP assigns you an IP address. Otherwise, please choose Dynamic IP.

PPTP IP Address: Enter the information provided by your ISP. (Only applicable for Static IP PPTP.)

PPTP Subnet Mask: Enter the information provided by your ISP. (Only applicable for Static IP PPTP.)

PPTP Gateway IP Address: Enter the information provided by your ISP. (Only applicable for Static IP PPTP.)

PPTP Server IP Address: IP address of PPTP server.

Username: User/account name that your ISP provides to you for PPTP dial-up.

Password: Password that your ISP provides to you for PPTP dial-up.

Verify Password: Fill in with the same password in Password field.

Reconnect Mode: Choose **Always-on** when you want to establish PPTP connection all the time. If you choose **Connect-on-demand**, the device will establish PPTP connection when local users want to surf Internet, and disconnect if no traffic after time period of Maximum Idle Time.

Maximum Idle Time: The time of no activity to disconnect your PPTP session. Set it to zero or choose Always-on to disable this feature.

The screenshot shows the PPTP configuration window. At the top, it says 'PPTP' and 'Enter the information provided by your Internet Service Provider (ISP)'. Below this, there are several fields: 'Address Mode' with radio buttons for 'Dynamic IP' and 'Static IP' (selected); 'PPTP IP Address' with a text box containing '0.0.0.0'; 'PPTP Subnet Mask' with a text box containing '255.255.255.0'; 'PPTP Gateway IP Address' with a text box containing '0.0.0.0'; 'PPTP Server IP Address' with an empty text box; 'Username' with an empty text box; 'Password' with an empty text box; 'Verify Password' with an empty text box; 'Reconnect Mode' with radio buttons for 'Always-on' and 'Connect-on-demand' (selected); and 'Maximum Idle Time' with a text box containing '300' and the unit 'seconds'. At the bottom right, there are two buttons: 'Save Settings' and 'Don't Save Settings'.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

L2TP

Choose this Internet connection if your ISP provides you L2TP account.

Address Mode: Choose Static IP only if your ISP assigns you an IP address. Otherwise, please choose Dynamic IP.

L2TP IP Address: Enter the information provided by your ISP. (Only applicable for Static IP L2TP.)

L2TP Subnet Mask: Enter the information provided by your ISP. (Only applicable for Static IP L2TP.)

L2TP Gateway IP Address: Enter the information provided by your ISP. (Only applicable for Static IP L2TP.)

L2TP Server IP Address: IP address of L2TP server.

Username: User/account name that your ISP provides to you for L2TP dial-up.

Password: Password that your ISP provides to you for L2TP dial-up.

Verify Password: Fill in with the same password in Password field.

Reconnect Mode: Choose Always-on when you want to establish L2TP connection all the time. Choose Connect-on-demand the device will establish L2TP connection when local users want to surf Internet, and disconnect if no traffic after time period of Maximum Idle Time.

Maximum Idle Time: The time of no activity to disconnect your L2TP session. Set it to zero or choose Always-on to disable this feature.

L2TP

Enter the information provided by your Internet Service Provider (ISP).

Address Mode : ☐ Dynamic IP ☒ Static IP

L2TP IP Address :

L2TP Subnet Mask :

L2TP Gateway IP Address :

L2TP Server IP Address :

Username :

Password :

Verify Password :

Reconnect Mode : ☐ Always-on ☒ Connect-on-demand

Maximum Idle Time : seconds

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

3G

Choose this Internet connection if you already use a SIM card for 3G Internet service from your Telecom company. The fields here may not be necessary for your connection. The information on this page should only be used if required by your service provider.

Account/Profile Name: Fill in a name to indicate the following 3G configuration.

Username: (Optional) Fill in only if requested by ISP.

Password: (Optional) Fill in only if requested by ISP.

Dialed Number: Enter the number to be dialed.

Authentication: PAP, CHAP, or Auto detection. The default authentication method is Auto.

APN: (Optional) Enter the APN information.

PIN: Enter the PIN associated with your SIM card.

Reconnect Mode: Auto or Manual. Connect to 3G network automatically or manually.

Maximum Idle Time: The time of no activity to disconnect established 3G session. Set it to zero or choose Auto in Reconnect Mode to disable this feature.

Primary DNS Server: (Optional) Fill in if provided by your ISP. If not, keep the default value.

Secondary DNS Server: (Optional) Fill in if provided by your ISP. If not, keep the default value.

Keep Alive: Disable or Use LCP Echo Request. It depends on ISP requirement.

Bridge Ethernet Ports: Activate this feature to change Ethernet WAN port to LAN port.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

The screenshot shows a configuration window titled "3G INTERNET CONNECTION TYPE". Below the title is a subtitle: "Enter the information provided by your Internet Service Provider (ISP)". The form contains the following fields and options:

- Account/Profile Name :** A text input field.
- Username :** A text input field with "(optional)" to its right.
- Password :** A text input field with "(optional)" to its right.
- Dialed Number :** A text input field.
- Authentication :** A dropdown menu currently set to "Auto".
- APN :** A text input field with "(optional)" to its right.
- Pin :** A text input field.
- Reconnect Mode :** Two radio buttons: "Auto" (selected) and "Manual".
- Maximum Idle Time :** A text input field containing "300" followed by the word "seconds".
- Primary DNS Server :** A text input field containing "0.0.0.0".
- Secondary DNS Server :** A text input field containing "0.0.0.0".
- Keep Alive :** Two radio buttons: "Disable" (selected) and "Use LCP Echo Request".
- Bridge ethernet ports :** A checkbox labeled "Enable", which is currently unchecked.

At the bottom right of the window are two buttons: "Save Settings" and "Don't Save Settings".

Static IP

Choose this Internet connection if your ISP assigns you a static IP address.

IP Address: Enter the IP address assigned to your network connection.

Subnet Mask: Enter the subnet mask.

Default Gateway: Enter the default gateway.

Primary DNS Server: Enter the primary DNS server.

Secondary DNS Server: Enter the secondary DNS server.

MTU: You may need to change the Maximum Transmission Unit (MTU) for optimal performance. The default value is 1500.

MAC Address: The default MAC Address is set to the Internet port's physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP. You can use the **Clone Your PC's MAC Address** button to replace the Internet port's MAC address with the MAC address of your Ethernet card.

The screenshot shows a configuration window titled "STATIC IP ADDRESS INTERNET CONNECTION TYPE". Below the title is a subtitle: "Enter the static address information provided by your Internet Service Provider (ISP)". The form contains several input fields: "IP Address" (0.0.0.0), "Subnet Mask" (255.255.255.0), "Default Gateway" (0.0.0.0), "Primary DNS Server" (0.0.0.0), and "Secondary DNS Server" (0.0.0.0). Below these is the "MTU" field (1500) with a note "(bytes) MTU default = 1500". At the bottom is the "MAC Address" field (00-00-00-00-01-00) and a "Restore MAC" button. At the very bottom are two buttons: "Save Settings" and "Don't Save Settings".

STATIC IP ADDRESS INTERNET CONNECTION TYPE	
Enter the static address information provided by your Internet Service Provider (ISP).	
IP Address :	<input type="text" value="0.0.0.0"/>

Wireless Settings

This section will help you to manually configure the wireless settings of your router. Please note that changes made on this section may also need to be duplicated on your Wireless Client.

WIRELESS NETWORK SETTINGS

Enable Wireless: Select this checkbox to enable wireless access. When you set this option, the following parameters take effect.

Wireless Network Name: Also known as the SSID (Service Set Identifier), this is the name of your Wireless Local Area Network (WLAN). Enter a name using up to 32 alphanumeric characters. The SSID is case-sensitive. The default name is "dlink_DWR-113".

802.11 Mode: **B/G/N mixed:** Enable this mode if your network contains a mix of 802.11b and 802.11g devices.

G mode: Enable this mode if your network has only 802.11g devices. If you have both 802.11b and 802.11g wireless clients, disable this mode.

Auto Channel Scan: A wireless network uses specific channels in the wireless spectrum to handle communication between clients. Some channels in your area may experience interference from other electronic devices. Choose the clearest channel to help optimize the performance and coverage of your wireless network.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

WIRELESS NETWORK

Use this section to configure the wireless settings for this device. Please note that changes made on this section may also need to be duplicated on your wireless client.

To protect your privacy you can configure wireless security features. This device supports three wireless security modes including: WEP, WPA and WPA2.

Save Settings Don't Save Settings

WIRELESS NETWORK SETTINGS

Enable Wireless : ☒

Wireless Network Name : (Also called the SSID)

802.11 Mode : B/G/N mixed

Auto Channel Scan : ☐

Wireless Channel : 2.462 GHz - CH 11

Visibility Status : ☒ Visible ☐ Invisible

WIRELESS SECURITY MODE

Security Mode : None

Save Settings Don't Save Settings

Helpful Hints..

- Changing your Wireless Network Name is the first step in securing your wireless network. We recommend that you change it to a familiar name that does not contain any personal information.

Enabling Hidden Mode is another way to secure your network. With this option enabled, no wireless clients will be able to see your wireless network when they perform scan to see what's available. In order for your wireless devices to connect to your router, you will need to manually enter the Wireless Network Name on each device.

If you have enabled Wireless Security, make sure you write down WEP Key or Passphrase that you have configured. You will need to enter this

Wireless Channel: Indicates the channel setting for the DWR-113. By default the channel is set to 11. This can be changed to fit the channel setting for an existing wireless network or to customize your wireless network. Click **Auto Channel Scan** to automatically select the channel that it will operate on. This option is recommended because the router will choose the channel with the least amount of interference.

Visibility Status: Select **Invisible** if you do not want the SSID of your wireless network to be broadcasted by DWR-113. The SSID of your router will not be seen by Site Survey utilities. Therefore while setting up your wireless clients, you will have to manually enter your SSID to connect to the router.

WIRELESS SECURITY MODE

Security Mode: This device supports three wireless security modes, **WEP**, **WPA-Personal**, **WPA-Enterprise** or **None**. WEP is the original wireless encryption standard. WPA provides a higher level of security and WPA-Personal does not require an authentication server. When WPA enterprise is enabled, the router uses EAP (802.1x) to authenticate clients via a remote RADIUS server.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

The screenshot shows the D-Link DWR-113 web interface. At the top, it says 'Product Page : DWR-113' and 'Firmware Version : V1.00b02'. The D-Link logo is prominent. Below the logo, there are tabs for 'DWR-113', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'SUPPORT'. The 'DWR-113' tab is selected, and within it, 'WIRELESS SETTINGS' is chosen. The main content area is titled 'WIRELESS NETWORK' and contains instructions on configuring wireless settings. Below this, there's a section for 'WIRELESS NETWORK SETTINGS' with fields for 'Enable Wireless' (checked), 'Wireless Network Name' (empty), '802.11 Mode' (B/G/N mixed), 'Auto Channel Scan' (unchecked), 'Wireless Channel' (2.462 GHz - CH 11), and 'Visibility Status' (Visible). At the bottom, there's a 'WIRELESS SECURITY MODE' section with 'Security Mode' set to 'None'. 'Save Settings' and 'Don't Save Settings' buttons are at the bottom right. A 'Helpful Hints..' sidebar on the right provides additional guidance on network naming and security.

Network Settings

Router Settings

This section will help you to change the internal network settings of your router and to configure the DHCP Server settings.

Router IP Address: Enter the IP address of the router. The default IP address is **192.168.0.1**.

If you change the IP address, you will need to enter the new IP address in your browser to get into the configuration utility.

Default Subnet Mask: Enter the **Subnet Mask** of the router. The default subnet mask is **255.255.255.0**.

Local Domain Name: Enter the local domain name for your network.

The screenshot shows the D-Link DWR-113 web interface. The top bar displays 'Product Page : DWR-113' and 'Firmware Version : V1.00b02'. The D-Link logo is prominent. The left sidebar contains navigation links: INTERNET, WIRELESS SETTINGS, NETWORK SETTINGS (selected), and LOGOUT. Below these is an 'Internet Online' status indicator and a 'Reboot' button. The main content area is divided into two sections: 'NETWORK SETTING' and 'DHCP SERVER SETTINGS'. The 'NETWORK SETTING' section includes a warning about optional settings and buttons for 'Save Settings' and 'Don't Save Settings'. The 'DHCP SERVER SETTINGS' section includes fields for 'Router IP Address' (192.168.0.1), 'Default Subnet Mask' (255.255.255.0), and 'Local Domain Name'. The 'DHCP SERVER SETTINGS' section also includes a checkbox for 'Enable DHCP Server' (checked), a range for 'DHCP IP Address Range' (50 to 199), a 'DHCP Lease Time' (86400 seconds), and fields for 'Primary DNS IP Address', 'Secondary DNS IP Address', 'Primary WINS IP Address', and 'Secondary WINS IP Address'. At the bottom of the DHCP section are 'Save Settings' and 'Don't Save Settings' buttons. A 'Helpful Hints...' sidebar on the right provides additional information about DHCP server settings.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

DHCP Server Settings

The DWR-113 has a built-in DHCP (Dynamic Host Control Protocol) server. The DHCP server assigns IP addresses to devices on the network that request them. By default, the DHCP Server is enabled on the device. The DHCP address pool contains a range of IP addresses, which is automatically assigned to the clients on the network.

Enable DHCP Server: Select this box to enable the DHCP server on your router.

DHCP IP Address Range: Enter the starting and ending IP address for the server's IP assignment.

DHCP Lease Time: The time period for the IP address lease. Enter the Lease time in minutes.

Primary DNS IP Address: Primary DNS IP Address: assign a primary DNS Server to DHCP clients.

Secondary DNS IP Address: Secondary DNS IP Address: assign a DNS Server to DHCP clients.

Primary WINS IP Address: Primary WINS IP Address: assign a primary WINS Server to DHCP clients.

Secondary WINS IP Address: Secondary WINS IP Address: assign a WINS Server to DHCP clients.

The screenshot shows the 'DHCP SERVER SETTINGS' page. At the top, it says 'Use this section to configure the built-in DHCP server to assign IP address to the computers on your network.' Below this are several settings: 'Enable DHCP Server' is checked; 'DHCP IP Address Range' is set to 50 to 199 with a note '(addresses within the LAN subnet)'; 'DHCP Lease Time' is 1440 minutes; 'Primary DNS IP Address', 'Secondary DNS IP Address', 'Primary WINS IP Address', and 'Secondary WINS IP Address' are all set to 0.0.0.0. At the bottom right are two buttons: 'Save Settings' and 'Don't Save Settings'.

DHCP SERVER SETTINGS	
Use this section to configure the built-in DHCP server to assign IP address to the computers on your network.	
Enable DHCP Server :	<input checked="" type="checkbox"/>
DHCP IP Address Range :	50 to 199 (addresses within the LAN subnet)
DHCP Lease Time :	1440 (minutes)
Primary DNS IP Address	0.0.0.0
Secondary DNS IP Address	0.0.0.0
Primary WINS IP Address	0.0.0.0
Secondary WINS IP Address	0.0.0.0

Save Settings Don't Save Settings

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

Virtual Server

The device can be configured as a virtual server so that users can access services such as Web or FTP via the public (WAN) IP address of the router.

Well-known Services: This contains a list of pre-defined services.

Copy to: Copies the rule to the line of the specified ID.

Use schedule rule: You may select **Always On** or choose the number of a schedule rule that you have defined.

VIRTUAL SERVERS LIST

ID: Identifies the virtual server.

Server IP: Port: Enter the last digits of the IP address of the computer on your local network that you want to allow the incoming service. In the next box, enter the port number that you would like to open.

Enable: Select this box to enable the rule.

Schedule Rule #: Specify the schedule rule number.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

Helpful Hints..

- You can select your computer from the list of DHCP clients in the **Computer Name** drop down menu, or enter the IP address manually of the computer you would like to open the specified port to.
- This feature allows you to open a range of ports to a computer on your network. To do so, enter the first port in the range you would like to open on the router in the first box under **Public Port** and last port of the range in the second one. After that you enter the first port in the range that the internal server uses in the first box under **Private Port** and the last port of the range in the second.
- To open a single port using this feature, simply enter the same number in both boxes.

MAC Address Filter

The **MAC (Media Access Controller) Address Filter** option is used to control network access based on the MAC Address of the network adapter. A MAC address is a unique ID assigned by the manufacturer of the network adapter. This feature can be configured to **ALLOW** or **DENY** network/Internet access.

MAC FILTERING SETTINGS

- MAC Address Control:** Select this box to enable Mac Filtering.
- Connection Control:** Wireless and wired clients with **C** selected can connect to this device and **allow/deny** connections from unspecified MAC addresses.
- Association Control:** Wireless clients with **A** selected can associate to the wireless LAN; and **allow/deny** connections from unspecified MAC addresses.

MAC FILTERING RULES

- ID:** Identifies the rule.
- MAC Address:** Specify the MAC Address of the computer to be filtered.
- IP Address:** Specify the last section of the IP address.
- Wake On LAN:** Click **Trigger** to configure Wake On LAN.

- C:** If this box is selected, the rule will follow the connection control setting specified in MAC filtering settings.
- A:** If this box is selected, the rule will follow the connection control setting specified in MAC filtering settings.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

The screenshot shows the D-Link DWR-113 Advanced Setup page. The top navigation bar includes 'D-Link', 'Product Page : DWR-113', and 'Firmware Version : V1.00b02'. The left sidebar lists various setup options: VIRTUAL SERVER, APPLICATION RULES, QOS ENGINE, MAC ADDRESS FILTER (selected), URL FILTER, OUTBOUND FILTER, INBOUND FILTER, SNMP, ROUTING, ADVANCED WIRELESS, ADVANCED NETWORK, and LOGOUT. The main content area is titled 'MAC ADDRESS FILTER' and contains the following sections:

- MAC ADDRESS FILTER:** A text box explaining that the MAC (Media Access Controller) Address filter option is used to control network access based on the MAC Address of the network adapter. A MAC address is a unique ID assigned by the manufacturer of the network adapter. This feature can be configured to ALLOW or DENY network/Internet access. Below this text are 'Save Settings' and 'Don't Save Settings' buttons.
- MAC FILTERING SETTINGS:** This section includes:
 - MAC Address Control:** A checkbox labeled 'Enable'.
 - Connection control:** A checkbox. When selected, it allows wireless and wired clients with 'C' checked to connect to the device, and 'allow' unspecified MAC addresses to connect.
 - Association control:** A checkbox. When selected, it allows wireless clients with 'A' checked to associate to the wireless LAN, and 'allow' unspecified MAC addresses to associate.
- DHCP clients:** A dropdown menu labeled '-- select one --' with a 'Copy to ID' button and a '--' dropdown.
- MAC FILTERING RULES:** A table with 5 rows and 5 columns: ID, MAC Address, IP Address, C, and A. Each row has input fields for MAC and IP addresses, and checkboxes for C and A. Below the table are 'Previous page' and 'Next page' buttons.
- Helpful Hints:** A sidebar on the right containing:
 - MAC Address Control:** Allows you to assign different access rights for different users and to assign a specific IP address to a certain MAC address.
 - Connection control:** Connection control allows you to allow or deny the wired and wireless clients to connect to this device and the Internet. Check Connection control to enable the controlling.
 - Association control:** The Association process is the exchange of information between wireless clients and this device to establish a link between them. A wireless client is capable of transmitting and receiving data to this device only after the association process is successfully completed.

At the bottom of the main content area are 'Save Settings' and 'Don't Save Settings' buttons.

SNMP

SNMP (Simple Network Management Protocol) is a widely used network monitoring and control protocol that reports activity on each network device to the administrator of the network. SNMP can be used to monitor traffic and statistics of the DWR-113. The DWR-113 supports SNMP v1 or v2c.

SNMP

SNMP Local: Select **Enabled** to allow local SNMP administration. Select **Disabled** to disallow local SNMP administration.

SNMP Remote: Select **Enabled** to allow local SNMP administration. Select **Disabled** to disallow local SNMP administration.

Get Community: Enter the password **public** in this field to allow “Read only” access to network administration using SNMP. You can view the network, but no configuration is possible with this setting.

Set Community: Enter the password **private** in this field to gain “Read and Write” access to the network using SNMP software.

IP 1, IP 2, IP 3, IP 4: Enter up to four IP addresses of any trap targets on your network.

SNMP Version: Select the SNMP version of your system.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

Routing

The **Routing** page allows you to specify custom routes that determine how data is moved around your network.

RIP SETTING

RIP: Select this box to enable routing.

RIPv1: Protocol in which the IP address is routed through the internet.

RIPv2: Enhanced version of RIPv1 with added features such as Authentication, Routing Domain, Next Hop Forwarding, and Subnet-mask Exchange.

ROUTING RULES

ID: Identifies the rule.

Destination: Enter the IP of the specified network that you want to access using the static route.

Subnet Mask: Enter the subnet mask to be used for the specified net work.

Gateway: Enter the gateway IP address to the specified network.

Hop: Enter the amount of hops it will take to reach the specified network.

Note: In a transmission path, each link is terminated at a network device such as a router or gateway. The number of hops equals the number of routers or gateways that data must pass through before reaching the destination.

Enable: Select this box to enable the rule.

Helpful Hints..

- Each route has a check box next to it, check this box if you want the route to be enabled.
- The destination IP address is the address of the host or network you wish to reach.
- The netmask field identifies the portion of the destination IP in use.
- The gateway IP address is the IP address of the router, if any, used to reach the specified destination.

More...

Advanced Wireless

Advanced Wireless contains settings which can negatively affect the performance of your router if configured improperly. Do not change these settings unless you are already familiar with them or have been instructed to make the change by one of our support personnel.

Beacon Interval: Beacons are packets sent by an Access Point to synchronize a wireless network. Specify a value. 100 is the default setting and is recommended.

Transmit Power: Set the transmit power of the antennas.

RTS Threshold: This value should remain at its default setting of 2347. If inconsistent data flow is a problem, only a minor modification should be made.

Fragmentation: The fragmentation threshold, which is specified in bytes, determines whether packets will be fragmented. Packets exceeding the 2346 byte setting will be fragmented before transmission. 2346 is the default setting.

DTIM Interval: A Delivery Traffic Indication Message (DTIM) is a countdown informing clients of the next window for listening to broadcast and multicast messages. The default interval is 3.

WMM Capable: WMM (Wi-Fi Multimedia) is QoS (Quality of Service) system for your wireless network. Enable this option to improve the quality of video and voice applications for your wireless clients.

TX Rates: Select the basic transfer rates based on the speed of wireless adapters on your wireless network. It is strongly recommended to keep this setting to **Auto**.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

D-Link DWR-113 User Manual

34

Admin

The **Admin** page allows you to change the Administrator password and enable Remote Management. The Admin has read/write access while the user has read-only access. Only the admin has the ability to change both admin and user account passwords.

ADMINISTRATOR

New Password: Enter a password that the admin account will use to access the router's management interface.

Confirm Password: Confirm the chosen password.

REMOTE MANAGEMENT

Remote Management: Remote management allows the DWR-113 to be configured from the Internet using a web browser. A username and password is still required to access the Web-Management interface. Usually only a member of your network can browse the built-in web pages to perform Administrator tasks. This feature enables you to perform Administrator tasks from the remote (Internet) host.

IP Allowed to Access: Enter the Internet IP address of the PC that has access to the Broadband Router. If you enter an asterisk (*) in this field, then anyone will be able to access the Router. Adding an asterisk (*) into this field could present a security risk and is not recommended.

Port: This is the port number used to access the router. Example: 8080 is the port used for the Web-Management interface.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

The screenshot shows the D-Link DWR-113 Web Management interface. At the top, it displays 'Product Page : DWR-113' and 'Firmware Version : V1.00b02'. The D-Link logo is prominently displayed. Below the logo is a navigation menu with tabs: DWR-113, SETUP, ADVANCED, TOOLS, STATUS, and SUPPORT. The 'ADMIN' tab is selected, showing a sidebar with links: ADMIN, TIME, SYSLOG, EMAIL SETTINGS, SYSTEM, FIRMWARE, DYNAMIC DNS, SYSTEM CHECK, SCHEDULES, LOGOUT, and an 'Internet Online' status indicator with a 'Reboot' button. The main content area is titled 'ADMINISTRATOR SETTINGS' and contains a message: 'To help secure your network, we recommend that you should choose a new password.' Below this are 'Save Settings' and 'Don't Save Settings' buttons. The 'ADMINISTRATOR (THE DEFAULT LOGIN NAME IS "admin")' section has input fields for 'New Password' and 'Confirm Password'. The 'REMOTE MANAGEMENT' section includes a checkbox for 'Enable Remote Management' (set to 'Enabled'), an input field for 'IP Allowed to Access', and a 'Port' dropdown menu (set to 'Manual'). At the bottom of this section are 'Save Settings' and 'Don't Save Settings' buttons. A 'Helpful Hints..' sidebar on the right provides security advice and a 'More...' link.

Time

This section will help you set the time zone that you are in and the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to adjust the time when needed.

Time: Displays the current time and date of the DWR-113.

Time Zone: Select the appropriate **Time Zone** from the drop-down box.

Automatically synchronize with Internet time server: Select this checkbox to automatically synchronize the DWR-113 with an Internet time server.

NTP Server Used: Choose the NTP Server used for synchronizing time and date.

Sync. Result: Shows the result of the last time synchronization.

TIME AND DATE

The Time and Date Configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to adjust the time when needed.

Syslog

The DWR-113 keeps a running log of events and activities occurring on the router. You may send these logs to a SysLog server on your network.

Enable Logging to Syslog Server: Select this box to send the router logs to a Syslog Server.

Syslog Server IP Address: Enter the address of the Syslog server that will be used to send the logs. You may also select your computer from the drop-down box (only if you want to receive an IP address from the router via DHCP).

The screenshot shows the D-Link DWR-113 web interface. At the top, it says 'Product Page : DWR-113' and 'Firmware Version : V1.00b02'. The D-Link logo is prominently displayed. Below the logo is a navigation bar with tabs: 'DWR-113', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'SUPPORT'. The 'DWR-113' tab is selected. On the left side, there is a vertical menu with options: 'ADMIN', 'TIME', 'SYSLOG', 'EMAIL SETTINGS', 'SYSTEM', 'FIRMWARE', 'DYNAMIC DNS', 'SYSTEM CHECK', 'SCHEDULES', and 'LOGOUT'. The 'SYSLOG' option is highlighted. The main content area is titled 'SYSLOG' and contains the text: 'The SysLog options allow you to send log information to a SysLog Server.' Below this text are two buttons: 'Save Settings' and 'Don't Save Settings'. Further down, there is a section titled 'SYSLOG SETTINGS' which includes a checkbox for 'Enable Logging To Syslog Server' (which is currently unchecked) and a text input field for 'Syslog Server IP Address'. At the bottom of this section are two more buttons: 'Save Settings' and 'Don't Save Settings'. On the right side of the interface, there is a 'Helpful Hints..' section with a bullet point explaining that a System Logger (syslog) is a server that collects logs from different sources and that if the LAN includes a syslog server, the user can use this option to send the router's logs to that server. A 'More...' link is also present.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.

E-mail Settings

E-mail Settings allows you to send the system log files, router alert messages, and firmware update notifications to an e-mail address.

Enable E-mail Notification: When this option is enabled, router activity logs are e-mailed to a designated e-mail address.

SMTP Sever IP and Port: Enter the SMTP server IP address followed by a colon and the port number (e.g. 123.123.123.1:25).

SMTP Username: Enter the SMTP username.

SMTP Password: Enter the SMTP password.

Send E-mail Alert to: Enter the e-mail address where you would like the e-mail sent to.

E-mail Subject: Enter a subject for the e-mail.

E-mail Log Now: Click this button to access the e-mail log.

Click **Save Settings** to save your changes, or click **Don't Save Settings** to discard your changes.
