Test equipment (Please see Chapter 8 for exact information of test equipment)

Radiated: C1, R1, A2, P2, M1

Description

The measurement antenna was situated in 3 m distance to the EUT. The EUT was placed on a tilt table at a height of 1.5 m above the ground plane. The tilt table was staying on a turn table. The tilt table and turn table were continuously moved in all axis to find the maximum radiated power of the EUT Signal.

Between EUT and measurement antenna absorbers are covering the GND-Plane.

See photos in Annex C for test Set-up and block diagram 1 in Chapter 2.9.

For spectrum analyzer settings please see plots in Annex A.

* The tested EUT uses a special test mode, not a real test mode. According to customer's information each RF transmission of the EUT will cease within less than 5 seconds after being triggered by the user. No test with real mode was done because the appropriate set-up for it is too complex and costly.
