

Application No.: HM154065

Date: 2005-09-06

FCC ID: M8QF8849TX

Circuit Description

The 49.86MHz crystal oscillator drives the base of Q3 the final/buffer amplifier. The modulation provided by Q1 & Q2. The output of Q3 has the matching network consisting of C8 and L2 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 20cm long telescoping chrome over brass tubing. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("6F22" size battery x 1) primary battery.

Operation Descriptions

The transmitter is a toy operating at 49.86MHz band. The transmitter is powered by a 9 battery (6F22 x 1) and the transmitting frequency is crystal controlled. There are 2 buttons to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 49.86 carrier frequency.

Remarks:

The transmitter is a 2 Button transmitter.

The EUT continues to transmit while Button is being pressed.

It is Pulse transmitter, Modulation by Q1 & Q2; and type is Pulse modulation.
