FCC ID: MQOTT700-20000
Report #: 2007113

Appendix A: RF Exposure Compliance

Per the new FCC test procedures for 802.11abg devices, SAR evaluation is not required since the average conducted output power in g mode is not more than 0.25 dB higher than the average conducted output power in b mode, and in fact is less than the average conducted output power in b mode.
