RE: FCCID: N7NACRD2 Grantee: Sierra Wireless Inc.
Equipment Class: Non-broadcast transmitter
Application for Class II Permissive Change dated May 4, 1999

Dear Sir/Madam:

The following information is submitted in support of a Class II Permissive Change to the certification of the N7NACRD2 transmitter. There are no physical or electrical changes as defined in Section 2.908.

In the original application, an HP620 palmtop computer was used in the typical setup for the purposes of SAR measurements. Currently our grant notes **"This Grant applies to unit used in palm top configuration with supplied antenna which uses non-standard connector."** We would like to change this restriction such that the unit is certified for use in typical laptop computers as well.

To support this change, the SAR testing was repeated with the device inside a Toshiba 420CDT laptop computer. The accompanying report summarizes the results of this testing.

Please advise me if we may provide any additional information for your review of this application for Class II Permissive change to the certification of the N7NACRD2 transmitter.

Sincerely

A handwritten signature in black ink, appearing to read "Trent McKeen", written over a horizontal line.
