

**RF exposure requirements – FCC ID: NCMOMO0205**

Dear Examiner,

MO0205 is marketed without defined antenna. According to the limit in 47 CFR 1.1310, we get the value of the maximum antenna gain as follow:

The maximum measured power output in the 850 MHz band is 1318.26 mW (31.2dBm, see 7layers test report MDE\_OPTI\_0705\_FCCa).

The maximum permissible exposure is defined in 47 CFR 1.1310 with 0.5495 mW/cm<sup>2</sup>.

The transmitter is using indoor antennas that operate at 20 cm or more from nearby persons.

The maximum antenna gain G is calculated using the general equation:

$$S = P \cdot G / 4\pi R^2$$

$$S = 0.5495 \text{ mW/cm}^2$$

$$P = 1318,26 \text{ mW}$$

$$R = 20 \text{ cm}$$

$$\pi = 3.1416$$

Solving for G; the maximum antenna gain is 3.2121 dBi.

Best Regards  
7 layers AG
