

This is a detailed view of a mobile phone's main logic board, which is green. The board is populated with numerous integrated circuits (chips), resistors, capacitors, and other electronic components. Key features include:

- A large silver metal shield in the center, likely covering the baseband processor.
- A black rectangular component at the top left, possibly a power management IC or battery connector.
- A USB port at the top right.
- Two circular metallic connectors at the bottom, used for antenna connections.
- Various labeled components such as SK9000, U8900, L2500, and others.
- Barcode labels with alphanumeric codes like "PAPW00001469" and "PWMAD1342B00078".

The board is shown against a plain white background.
